A clear improvement, our patented Vision Grip™ handle system is lightweight, increases hand-to-grip contact 19%, and provides additional dampening from your hand to your shoulder. Killer comfort.

If looks could kill, our Power Ring™ glove lets you go all out, flat out. Padded impact rings protect your knuckles from floor and wall contact... whatever you throw yourself into.
Go to the wall, fearlessly. Our WallBEATER™ bumper reduces the shock of wall hits by 70% (vs. a normal plastic bumper) The inner bumper cushion absorbs and distributes the shock over the entire racquet frame, making the new Power Ring™ Power Ring Lite™ WhisperDamp™ Razor Lite™ Strobe Lite™ and ThunderStick™ racquets nearly unbreakable!

POWERWEB™ RACQUET TECHNOLOGY= 25% MORE POWER

Starving for power? Grab hold of the radical, new Power Ring™ racquet, featuring our exclusive PowerWEB™ racquet technology. This cool, new frame design allows us to spin a 102-sq-in web of uniformly longer main strings.

What's in it for you? Raw power - a minimum 25% power boost across the racquet face. When you play with the Power Ring, your power will explode to lethal levels.

No bad vibes here. Our exclusive DoubleBridge™ racquet technology offers advanced vibration dampening. The way the rocket scientists in R&D put it... two elastomeric dampeners, embedded in the frame at the 10 and 2 o'clock positions, enlarge the sweet spot, and dampen string and frame vibration toward the head of the racquet where you hit more balls. The extra weight also adds stability for better control. Go figure. It's on WhisperDamp™

Cover: We’ve chosen a few covers that represent some of our favorites over the years and some that have brought in the most positive responses. Mike Ray Premiere Issue, Drew Kachtik Chainsaw, Marty Hogan, Lynn Adams Holiday, Andy Roberts Terminator.
(Editorial Comments)

Are We Having Fun Yet?

This issue of KILLSHOT has probably been the most fun to put together since that premiere issue five years ago. We spent days going through thousands of photographs and slides in an attempt to find those that truly represent what has gone on around here, and in the world of professional racquetball, since 1991.

Some of what we found made us smile with the memories of people and events that we had forgotten. Others made us want to spit on the ground and make comments about the subject’s parentage (or lack thereof). It’s true that every picture tells a story, some worth repeating, some better left forgotten, and some nobody would believe anyway.

We found photos of Ronald MacDonald with a racquet, firefighters in full emergency gear holding racquets, all sorts of antics both on and off the court, unusual acrobatics and bizarre expressions.

But the thing that made us smile most was the fact that we are still here. Some people are happy about that, more than a few upset, and still others that could care less. The road has been a long one. Sometimes it has been fun but never easy.

Our premiere issue is featured on the cover. We mailed 50,000+ copies to racquetball players and clubs all across the U.S. and Canada free. Then we did it again for the second issue with Michelle Gilman on the cover. As subscriptions began to come in we were furiously buying lists of anyone we thought might be interested in racquetball: sports doctors, athletic directors, coaches and sporting goods stores. The first five issues each mailed to over 50,000 people.

We got some really strange letters, too; mostly people offended that we wanted to call our publication KILLSHOT. After all, didn’t that promote violence? We also got quite a few requests for free subscriptions from people who thought it only fair for us to honor their unfulfilled subscriptions to National Racquetball.

The weirdest response to our free magazine mailings came one morning in the form of a phone call from upstate New York. It seems that one of the recipients of the publication was being stalked by an unknown pursuer who was threatening to kill her. We purchased her name on a list of doctors and nurses in the sports medicine industry. At the time we were mailing in a polybag and the only thing visible within the bag was the masthead: KILLSHOT. She saw that in her post office box and immediately called the police. It took some talking to convince the detective that no one had sent her the publication as a prank and that her name was just one of thousands on a list.

Most of our letters and contacts from readers have been positive though, even those unhappy about something we’ve said or done. And that’s what has made the whole process worthwhile. I think there is a lesson in that. This sport is not for the publications or the manufacturers or the organizations. It’s for the players. And, yes, they’re having fun.

About your Subscription

We want to provide you with the best service possible. If you have questions about your subscription you might find the answer here without contacting us.

If you move.
When you move you must send us your change of address, including your old address. The postal service will not forward third class mail and issues will continue to be sent to your old address until we are notified. The address change must be received six weeks prior to your move so that our records can be changed and our mailing list updated.

Expiration and renewals
Renewal notices will be sent to all subscribers with a date to respond to avoid missing any issues. If that response date is missed and an issue is then missed, the only way to obtain the missing issue is by ordering a back issue copy of that magazine at the full price.

Foreign Subscriptions
Subscribers living outside the United States must purchase their subscriptions using U.S. funds. The simplest way is by using international or postal money order.

If you find it necessary to contact us please write to

Anniversary Special
issue very much interested me. It is on page 42 and it is a training program put out by Lawrence Adams, Inc. If you could let me know how to get in touch with them I would appreciate it.

Additionally, if you have any suggestions on videos or books, or anything that would help me to get started please let me know.

Keep up the good work.

B. Gire
Spokane, Washington

The tapes from Lawrence Adams, Inc. are called Mastery of Racquetball and combine over three hours of video taped instruction with printed workbooks and laminated practice cards. Contact Lawrence Adams, Inc. 46 Ravenna St., Ste B-6, Hudson, Ohio 44236. Another excellent instructional video is Cliff Swain's The Winning Edge. Contact Cliff Swain Enterprises at (800) 757-3839.

**Why don't you just apologize?**

Although I am not a subscriber to your publication, I have recently read your Summer 1996 edition. In the article "Class of 96, Grading the Pros" by Messrs Katz & Muller, I came across an item of interest which I am now pointing out to you.

In your review of Dan Fowler (p 43) you mention his recent suspension from AARA events. I was surprised to see this since as the State President of MWRA, I have never received any notification from AARA to this suspension. In checking this out, I spoke with Mr. Luke St. Onge and found out the real story. Dan was NOT suspended from AARA events but had been disciplined by the U.S. National Team. There is quite a difference, don't you think?!

I feel that you owe Dan not only a retraction in KILLSHOT but also a personal letter of apology for this error which tarnishes his fine reputation.

Larry Seidl
President, Maryland Amateur Racquetball Association
Featured Pro: Sudsy Monchik

Ranking: #1

Racquet: HEAD Big Bang

String: Forten Boss

Tension: 34 pounds

Average Number of Racquets Strung Per Tournament: 6

Comments:
Since Sudsy hits the ball harder than most any player on the planet, he doesn’t worry about trying to increase his power with low string tensions. Sudsy prefers tensions in the mid thirties to maximize control. This is quite different from most of the pros who prefer racquets strung in the twenties. He is most concerned with control and durability from his strings.

Sudsy credits his many traditions and rituals on and off the court for his tremendous success. One of these is to always use a freshly strung racquet for the semis and the finals of tournaments.
Are you confused about whether to use ice or heat for your racquetball injuries? Do you know how much to use and for how long? Let's try to straighten this out.

Injuries to soft tissues result in swelling. This swelling causes tissue damage by blocking oxygen delivery to cells and by the release of chemicals which cause further cell damage. Reducing this initial swelling is critical in order to improve your recovery time. This swelling, along with pain, encourages muscle atrophy and joint stiffness, further prolonging recovery.

Application of cold decreases the initial swelling, bleeding, pain, and inflammation of the tissues. The damaging, inflammatory response and cellular injury from swelling is reduced by cold applications.

Heat does just the opposite. It increases and encourages blood flow and reduces muscle spasm and joint stiffness. Heating tissues accelerates metabolism and improves the flow of lymphatic fluid and blood.

After an injury you should start with ice. Initially apply it constantly for one to two hours after the injury. Then use it 30 minutes per hour during the first 24 hours. An ice pack on top of wet towels is more effective than dry towels. Alternatively, you can use ice massage in slow, circular strokes for 10 to 20 minutes per hour. This is done by freezing a small paper cup of water and then peeling off the bottom of the cup so that the ice can be massaged like a roll-on deodorant.

During the second 24 hours, neither ice nor heat should be applied. This should be a time when you start gradual range of motion exercises to loosen stiff tissues and assess the degree of pain and discomfort.

During the third 24 hours, you should resort to heat. Moist heat is best. You can use a hydrocollator pack or a moist towel insulated with plastic or Saran wrap and then covered with a heating pad. Heat should be applied for 30 minutes every hour or two. Whirlpool baths are a wonderful alternative.

When you return to play, it is a good idea to warm the area before playing. Use heat for 1/2 to 3/4 hour before your match. Immediately after your match, apply ice for one hour. Do this the first couple of matches when you restart playing.

A final note about chronic and recurrent injuries. Residual and persistent joint stiffness, swelling, and discomfort is often best treated by “contrast therapy.” “Contrast therapy” is alternating cycles of hot and cold.

As with any injury, you should seek medical care from your physician to be sure your injury is only minor.
The killshot is certainly the most exciting weapon in racquetball. The prospect of hitting a shot that is so perfect that it is unreturnable by any player holds appeal like nothing else. In fact, the blistering killshot gives racquetball its aggressive reputation. It is what separates the game from its more congenial cousin, squash.

One of the biggest recognizable differences between the solid intermediate and the advanced or pro player is the frequency of successful killshooting. The master is able to consistently put the ball away from a disadvantaged position. Mere mortals tend to see far more skips and left-up balls resulting from their kill attempts. For this reason the kill has never been the bread-and-butter of any developing player. Even at the pro level, the pass is still the weapon of choice. But since it is human nature to opt for the most exciting element of the game, it is important to know how and when to shoot for the winner.

The killshot is simply a rally-ending shot. It is a shot that is unreturnable even to an opponent whose attempt to cover it is without error. This takes the form of a down-the-line, cross-court, or pinch that bounces twice before the other player could ever possibly reach it. In the best possible case, it is a flat roll. The most amazing part of the pro game is the pros' ability to return...
near kills that would have been clear putaways against the average competitor.

We see the IRT pros kill successfully from every position and every situation. That's why they're pros. They didn't always do that. They got to be pros by playing smart. Playing smart dictates attempting a kill only when two conditions are present. Those two conditions are a good set up, and the right court position.

The good setup means that you have time to position your feet and prepare your racquet. It also means being able to wait until the ball is very low to hit it.

The right court position for a kill usually means you are in front of your opponent, and/or you are in center court. The closer you are to the front wall, the greater your margin for error on kill attempts. Your opponent behind you means the ball has more time to bounce twice because he has farther to go to try to pick it up. Your being in front also allows you to legally obstruct his view of your own shot. Holding center court means you have the entire side of the court where he is not at your disposal in case your kill attempt pops up. Use passes and ceiling balls to your advantage to engineer this situation.

Remember...

...the kill is usually a low percentage shot. When in doubt, don't.

...you have the choice of the down-the-line kill, the cross kill, and the pinch or reverse kill.

...if you miss, miss up. You have an outside possibility of recovering from a left up kill. You have no chance of recovery from a skip.

...kills not only end the rally, they take the wind out of your opponent's sails!

For a perfect Killshot:

You must...
...bend your knees to lower your center of gravity to hit the ball low.
...hit with your racquet face flat.
...hit at least hard enough to get the ball to the front wall.
...keep your head down in order to keep your shot low.

You should...
...only kill when you are in a good position should your attempt pop up.
...only kill when you can afford a skip.
...practice hitting low before you count on a kill in a match.
...practice accuracy and timing first, work on velocity later.

DANGER! UNSAFE WATERS

Introducing Piranha, the deadliest, most aggressive string in the game...only from Forten

Sudsy Monchik, the #1 player on the IRT uses only Forten string.

Forten offers a full line of stringing products and racquet accessories.

One of KILLSHOT's goals has always been to give the leaders on and off
the courts a forum for expression. Our hope
has been that by including interviews, 
quotes, and comments, readers would be
informed and challenged. What we have
gotten has been controversy and plenty of
surprises. Never ones to shy away from
controversy, we always forge ahead and
print it just as they said it. We hope for
reader responses, and boy have we gotten
them. So whether you agree or disagree,
like it or not, here are some of the most
memorable quotes from our first five years.

"The biggest compliment that anyone
can give me is to say I'm a natural. It
means that they appreciate my talent and
my hard work looks like no work at all."

Cliff Swain
Issue #9 M/A 1993

"It took something different to domi­
nate in the '70's than it does today. The
best at any sport are the ones that can ac­
curately size up what it will take to win under
given circumstances, then perfect the skills
to accomplish it. Brumfield and Hogan
could do that. But I have to tell you, rac­
quetball today is at its highest level"

Mike Yellen
Issue #17 Winter 1995

"I can't describe the level of intensity
in the Brumfield days. Winning meant win­
ning at all costs. We would drill and train
for literally ten to twelve hours a day, seven
days a week. Most of today's players
would be standing around with their
tongues hanging out after only a few of the
marathon rallies we used to have."

Marty Hogan
Issue #17 Winter 1995

"...when I was twelve, I saw Lynn
Adams play for the first time. I had my pic­
ture taken with her and she wrote on it.
Don't get too good too fast 'cause I'll be
waiting...It explains a lot about being at the
top."

Michelle Gilman (now Gould)
Issue #1 Aug. 1991

"...someone who is young, aggres­
sive, and has good marketing skills,
can make a lot of money in racquet­
ball."

Andy Roberts
Issue #2 Sept. 1991

"...when I was growing up,
like everybody else, I used to sit by
the glass court and watch all the good
players and try to
emulate what they
were doing."

Tim Sweeney
Issue #6 S/O 1992

"I'm not as physically talented
as a lot of players, so I have to use
my head...I learned to take nothing
for granted; to use everything I
could recognize. Things like body
language on the court, or anything
else that would intimidate an oppo­
ponent..."

Caryn McKinney
Issue #3 Oct. 1991

"...right from the start, we started
training Lynn to dominate...It became a
goal and sort of an obsession for both of us
throughout our working together, our mar­
rriage, and our friendship."

Jim Carson
Issue #13 Spring 1994

"...the fact that they kept some of their
courts open for racquetball is one of the
biggest positives. It would have been easier
to close even more courts and more clubs
entirely when participation declined from
the boom. The clubs with vision kept their
courts open, and now are starting to be
rewarded as the sport is slowly becoming
more solid and players are coming back to
the courts."

Mark Wentura
Issue #14 Summer 1994
Ashaway...
Official String
of the AARA.

Ask your stringer for the Ashaway string designed to improve your game— and support the AARA at the same time.

Derek Robinson wins with KillFire in his racquet.

Killfire™
Ashaway's newest racquetball string, Hybrid of 18 gauge Kevlar® mains and 17 gauge SuperKill crosses. Recommended for players who want a superior blend of playability and durability.

PowerKill™ Pro
16 gauge composite string with a central core of Zyex® fibers for optimum power and resiliency. Recommended for players who want to maximize power in their game.

DuraKill™
15 gauge composite string with center core of Kevlar fibers for great durability and tension-holding. Recommended for power players with chronic string-breakage problems.

SuperKill® 16 ga/SuperKill® 17 ga
Both available in a variety of colors. Recommended for players of all skill levels.

Ashaway racquetball strings are available from your local stringer, or call:
When the first issue of *KILLSHOT* rolled off the presses in the summer of 1991, the playing public saw the first politically incorrect racquetball magazine. We had seen publications come and go in racquetball, and we knew that to succeed, we had to do things a little differently. We set out to make a magazine that was what we would like to read. We would fill the thing with truly colorful personalities, real information, good or not so good, and usable instruction. We set out to produce a totally professional product and promised never to take ourselves too seriously in the process. We knew we would rock a few boats. We had no idea how much fun it would be to rock them!

Five years later, we’re still rocking boats. We still say things some people wish we wouldn’t, hear things they wish we hadn’t, and do things they can’t believe we would. Funny thing is, our readers seem to like it. Interesting coverage of the pros, useful instructional items, and important information about equipment seem to be the things racquetball players want most.

Reader's calls, letters, faxes and Email all shape the publication. And in many ways, the publication has helped shape the industry. Building on one another’s success, the pro tour and *KILLSHOT* have pushed one another forward. Instead of just covering tour events as publications had done in the 70’s and 80’s, we formed a sort of partnership. A tour that lacked interest and was headed nowhere joined forces with a young entrepreneur named Hank Marcus and an upstart publication to build the most solid tour in history and a united voice in the industry.

*A foreshadowing of greatness. In one of the first events that we covered in 1991, Jason Mannino (left) and Sudsy Monchick (right) battled in St. Louis at the AARA High School Nationals.*

*Power racquetball. Blaster Egan Inoue demonstrates the power serve at a match in Japan in ’93.*

*continued on page 16*
The two best reasons to play with Head are also the two best players in the game.

Sudsy Monchik - The New IRT World Champion. / Cliff Swain - 4 Time IRT World Champion.

Sudsy's hot and right now he's the number one player on the tour. Just ask him and he'll tell you all about it. It's really when he stops talking that you'd better be ready to play! He chooses to play with the Big Bang, one of six in the Pyramid Series.

Cliff, the legendary 4 time IRT Champion, is currently ranked #2 in the world. He doesn't like to say much, most of the time he lets his racquet do the talking. The one he's speaking with currently is the New PP 175 G, One of six in the New PP G Series.
Even celebrities can't get enough. Comedian Marty Allen has a tough time deciding which will help him most on the court, the workout from which he's resting, or the issue of "KILLSHOT" he can't put down. In well-earned time off both courts, John Ellis and Sudsy Monchik let Dominique hang with them for awhile.

The great outdoors. The three wall game always provides a welcome break from trying to shoot photos through thick glass and strange court lighting. The only official AARA Outdoor Nationals ever (held in Jacksonville Florida in 1991) gave us these shots of Florida coed Rachel Smith (below large photo) AARA executive director Luke St. Onge in a rare playing shot (right), and the all-time king of the three walls Brian Hawkes (below right).

Feeding frenzy. During the grueling schedules at pro stops, food rockets to number one on everybody's priority list. Late night after the quarters on a hot August night in Stockton in 1992, Mike Yellen hydrates while Egan Inoue and Hank Marcus attack desert. Brian Hawkes was never far from his infamous cooler from which he produced an endless supply of turkey and tuna sandwiches, bagels, yogurt, and the like much as a magician produces rabbits.
In some sports you just protect yourself.

Now you can protect yourself in style with impact resistant fashion eyeguards from Leader. Our Vegas and Newport designs feature anti-fog, anti-scratch, shatterproof protection.

And they give you unobstructed peripheral vision so you won't miss a beat on the court.

Don't just protect yourself... do it in style with Leader.
From its beginnings as the Women's Professional Racquetball Association, the women's pro tour evolved into the Women's International Racquetball Tour. Below: Dee Ferreira-Worth, former president of the WPRA. Center: Jackie Paraiso, a dominant force in the early '90's she's back with a vengeance. Right: Still in the forefront of women's racquetball Michelle Gould won't release her stranglehold on the rest of the tour. Here Gould battles it out in a match at Las Vegas in 1996 with #2 ranked Cheryl Gudinas.

Hey, take my picture. Sometimes the editors couldn’t resist the temptation to get into the photos. Left: Lynn Adams hangs around with the Quertermous brothers. Below: Deep in conversation with Marty Hogan on his ranch. Bottom: Teaching Egan a new hold?

The road was bumpy, especially in the beginning. The publication's polished look and color pages mean that it must be printed by a magazine printer, and so must compete for a place in line against publications with huge press runs. We are the little guy in the magazine world, which means we've had to ask for your patience many times in the wake of inherent delays. We try our best to make doing this look easy but, in truth, it's not. If we took ourselves seriously at all, I would be describing the gargantuan amounts of time, money, and sacrifice all this requires.

But if we look at the road behind and the road ahead, it becomes impossible to be serious. This issue takes a brief respite from traditional format to reflect on our first five years. We've included information on the tour in an abbreviated form to make room for our trip down memory lane. We've also skimmed a little on instruction, and left out two favorite features entirely, Norm Blum's Passing Shots, and Aaron Katz' Outside Looking In. Rest assured, the columns and more instructional features will return next issue along with our more extensive tour photos and coverage. We'll also include a closer look at the recent Promus Hotels US Open whose results appear in this issue.

The new Pro Penn Racquetball was built for speed, not safety. This is good news considering the best way to win at racquetball is by playing totally out of control.

Created for and with the help of the professional players of the International Racquetball Tour (IRT).
Longer mainstrings mean more power...a proven fact. The new Mayhem LongString™ 21.0" Technology offers the longest mainstrings in racquetball— at least 5 1/2 inches longer than all competitor racquets without throat-pieces, and 6 1/2 inches longer than racquets with strings wrapped around a throat-piece. The combined length of Mayhem's ten center mains is at least 56 inches longer than those in all competitor racquets. Now that's power!

With standard oversize racquets or racquets with strings wrapped around a throat-piece, the power stops here.
IRT Travels to Japan

In 1996 efforts to extend the International Racquetball Tour into Japan took a major leap forward. Several of the IRT pros were warmly received for a series of satellite events and clinics that are the groundwork for full pro stops in Japan. Newly appointed IRT International Director Buzz Sawyer and Koichi Kitamura of IRT Japan and Moonlight Workshop have combined efforts to form the largest base of IRT sanctioned events outside North America.

The returning IRT pros raved about the eager crowds and the quickness and playing skills of the top players of Japan. They were also impressed with the abundance of fresh seafood and the excitement of seeing sumo wrestling. In fact Sawyer, was even introduced to Konishiki, the largest and most adored wrestler.

Baltimore's Mike Engel was especially impressed with the level of play. He concluded that the main difference between the top players of Japan and those of the US is playing experience. Japan's national team members such as Bunia Hasegawa and Shoichi Sakai could easily be contenders in the IRT. Ruben Gonzalez, Brian Rankin, Mike Ray, and Kelly Gelhaus (all recent visitors) had similar observations.

So far, Sawyer has been the most dominate player in the satellites, drawing on his experience from the pro tour, as well as from his year in residence in Nagoya. The Heart Staff Open, traditionally one of Asia's most competitive tournaments, saw exceptional play from Mr. Higashi and Mr. Saito in the quarterfinals. The satellite in Sapporo, Hokkaido provided a look at the talents of Mr. Furuta, Mr. Sibata, and Mr. McCarty. In the finals, Sawyer prevailed in both events.

With the coordinated efforts on both sides of the Pacific from Mr. Sawyer and Mr. Kitamura well underway for more and more IRT Trips in the near future, look for Japan to begin hosting full pro stops as well as become a feeder for top players into the IRT.

Center: Mr. Konishiki in action against Mr. Takanonami in the Autumn Grand Sumo Basho.

Right: Buzz Sawyer attended the Sumo tournament as the guest of Mr. Konishiki, Japan's most adored wrestler.

Left: Sawyer and Ruben Gonzalez in racquetball action.

HIT IT HARD AND DUCK FAST.

If you like to play fast, we'd like to introduce you to the Penn Racquetball. Just be thankful you don't have to return your own serve.

The Official Ball of the AARA & WPPA
I need help setting up. When I stay on my toes, I miss my shots. When I try to set my feet, I usually set up too soon. What can I do?

The timing for setting up varies a lot depending on your anticipation, your speed, your opponent’s knowledge of shot selection, his power, etc. Before anything else, get into center court position (or as close as you can based on your opponent’s position and the ball) as soon as you have hit the ball. Stay “light” - up on the balls of your feet. Don’t “settle in” until just before he hits the ball. You need maximum mobility until that point, but once he is just about to hit, you have the best idea of where you need to be based on his swing prep, his stance, and his shot tendencies.

You are correct in your thinking that you will hit better shots with your feet set up in the proper position. That solid base is necessary for accuracy, and essential for utilizing the power in your legs for your shot. But never plant your feet until just before he hits the ball.

Mike Ray
IRT #4

What can I do to make my ceiling ball more effective? Every time I hit, even a good one, my opponent seems to put me away on the next shot.

The problem may be with your court coverage, not your shot. Remember, a ceiling ball affords you center court position every time. If you don’t take advantage of this, your opponent will probably kill a bad ceiling shot or win with a weak pinch or some kind of dink off a good one.

Hit the ceiling ball, then get to center court to cover his shots. From deep court, he is at a disadvantage. If your ceiling ball sets him up, there may be nothing you can do. But if your ceiling ball falls as it should, his weak return should be no match for your coverage from center court!

Woodie Clouse
IRT #15
The International Racquetball Tour and Women's International Racquetball Tour battled through early-season events at a fevered pace on the road to the Promus Hotels US Open.

For the players of the IRT, the events were familiar stops on a diverse array of courts that favored very different styles. Still, it was the top three, Sudsy Monchik, Cliff Swain, and Andy Roberts who dominated the finals. The spotlight was shared only briefly by Tony Jelso and Tim Doyle in doubles action from Las Vegas, and by Drew Kachtik at the event in Riverside. With only about 500 ranking points separating Swain and Roberts, mid-season events will make all the difference.

For the WIRT, Michelle Gould continued to be unstoppable, with tough Cheryl Guindas running a second. Laura Fenton and Jackie Paraiso posted the next-best efforts, while former National Champ Caryn McKinney made a surprise comeback run to the semis in Memphis.

The Fall season also provided an opportunity to assess the great new official tour products. Spalding returned as the official racquet of both tours, as did Penn with the ProPenn green ball and ProPenn gloves. Ektelon climbed on board with the new NFS footwear for both organizations, and Head introduced the official Pro Bag line. Leader provides the official eye protection for the IRT. Babolat is the official string sponsor of both tours. Rad Athletics provides the WIRT with eye protection.

For the true blue tour fans (which just about covers 99% of KILLSHOT readers) don't despair over the abbreviated photo and narrative coverage in this issue. We'll be back in the next issue with your usual fix, including lots more shots and information from the Promus Hotels US Open.

An abbreviated look at the results of the IRT and the WIRT

Just another benefit of playing our faster, tougher new racquetball: better black and blue trophies. Why, they look almost as pretty as the gold and silver ones.

Created for and with the help of the professional players of the International Racquetball Tour (IRT)
WEAR OUT YOUR OPPONENTS, NOT YOUR HANDS.

The Pro Penn Cabretta Racquetball Glove. Because to succeed in a war zone, a little body armor never hurts. Even if it's just for your hand.
The New Conquest. Grip It And Rip It!

Introducing the New Conquest Glove from Head!

The next time you’re hitting a 150 MPH serve, ask yourself - “Do you feel like you have a solid grip on your racquet?”

If the answer is somewhere close to yes you’re not getting what you need from your current racquetball glove.

Having a superior grip means more than just holding on to your racquet; it means having a mastery over it. The confidence of controlling not only your racquet but the ball and essentially your game!

Check out this incredible series of high performance racquetball gloves from Head and experience the true definition of grip.

Superior Quality Superior Performance

Interview

Scott Winters

By Marvin Quertermous, Managing Editor

From a start as the creator of one of the most ambitious court club programs in the sport, Scott Winters has climbed the corporate ladder to the helm of the Ektelon Racquetball division of the Prince Sports Group. In an industry full of numbers crunchers, he has built a career on the idea that the club player drives the industry. He has maintained that the individual player wants and deserves a sport that grows everyday, offers more rewards, and becomes more fun.

With the inside knowledge of the workings of several companies, and hands-on experience playing, teaching, and programming all part of his resume, Scott occupies a unique position in the game. His quiet confidence and soft-spoken manner contrast an irrepressible passion for the game and a tireless professionalism. When he refers to the grass roots of the sport, he counts himself one of the enthusiasts.

In this rare interview, Scott speaks candidly about his triumphs and setbacks, about his new power position and the state of the industry, and about his vision for the game as a whole as well as for the individual player he recognizes as the heart of the sport.

Q: Scott, tell me something about your background and your introduction to racquetball.

SW: My initiation into the world of racquetball came in 1977, while attending the University of California at Irvine. I was on the baseball team and one of the jobs the athletic department placed me in was supervising the racquetball facility. One of my teammates would come in to play each night when we closed. I loved the game from the start because it was so much fun while cross-training for baseball.

Q: Did you become involved directly with racquetball immediately after college?

SW: After college, I attempted to pursue a pro baseball career for a couple of years. My attempts failed to produce, so I drew upon my racquetball interest from school and immediately took a job as assistant manager at the University Athletic Club in Newport Beach. Racquetball eased the disappointment I carried from baseball. From Newport, I became the general manager and racquetball pro at the Irvine Clubhouse. This was during the time that it seemed like everybody was playing the game. The members of the club became like family and I developed long deep friendships from the experience. From there I took a position at Racquetball World where I became the Executive Director of the racquetball programs at three locations. I wanted to build the RBW system into the most powerful program in the sport. Although I was able to build a very active program, I also realized then that racquetball participation was starting to decline dramatically after the boom.

Q: The Racquetball World system is legendary. Is that the biggest program ever?

SW: I don't know for sure, but it was definitely racquetball programming at a high volume level. The average RBW location had 27 courts and over 3,000 members. I had top pros at each location including big names like Ed Andrews and Brian Hawkes. I was teaching between 300 and 350 students a week, running over 80 leagues, a tournament and four “shootouts” a month, four open tournaments a year, the Southern California Junior Team and a variety of mixers, promotions, and pro exhibitions. That junior team, made up of elite players under the age of sixteen, was my most rewarding program. The next thing is how many of them are still playing and teaching today. I was thrilled that Jim Carson stepped in to head the RBW program when I left because I knew he would keep the program going. Unfortunately, his position was deleted a few years ago following the most unfortunate trend of racquetball during the past ten years. The dramatic lack of support for the sport among some health facility owners and managers has been devastating. I commend the ones that have kept racquetball active in their facilities and realize its value for today and for the future. The lack of programing and promotion is one of the main reasons that the game is not growing and that there are so few women and kids playing the sport. Not enough people are working at the game at the grassroots level. This is why the RIA [Racquetball Industry Association] initiative and AmPro [teaching organization] are so critical to the success of the sport.

Q: Did you have any time to play?

SW: The RBW job gave me the opportunity to play pros like Mike Yellen, Ed Andrews, and Brian Hawkes on a regular basis. I also played exhibitions against legendary players such as Jerry Hilecher, Lynn Adams, Craig McCoy, Rich Wagner, Bret Harrett, Charlie Brumfield and Bud Muhleheisen. I once beat Jerry Hilecher. He was a little off and I was “unconscious” on the court. Dr. Bud [Muhleheisen], beat me something like 31 to 4! Although I played a

Anniversary Special
lot during the 1980's. I never really took my game as seriously. My goal has always been to work within the industry, and to become good enough to play at the open level and play competitively with the best players in the game. I've been able to do that. That job did leave me pretty burned out from being on the court so much. During the past seven years, I have enjoyed playing mainly for workouts and play-testing products I have developed. However, I'm starting to get the competition bug this year for the first time in years.

Q: Tell me about your experiences in the racquet industry.

SW: I became a consultant for Richcraft in 1988, and then their National Sales and Marketing Manager in 1990. The Richcraft experience was a great introduction to the sporting goods business. We handled all company administration, marketing, and manufacturing under the same roof. You could see the racquets being made from scratch just footsteps outside my office. We developed a good reputation for having innovative products made in the USA - including some with a lifetime guarantee! The relationship with parent company FTM was the best and worst thing that ever happened to Richcraft. While we were able to increase profits and customer service levels, the rug was pulled out from under us when our parent company's whole structure was dissolved.

Q: You captured serious attention in the industry with Team Richcraft.
SW: My best memories were of molding that team. Dan Obremski rose to the #3 ranking. I recognized John Ellis at an early age as the next phenomenon of the sport. I had worked as the AARA National Junior Commissioner for several years. Ellis stood alongside Jeff Conine and Sudsy Monchik as the most impressive junior players I ever saw. However, at the time of the company move to Miami, there were many changes, and I had to cut Caryn McKinney from our team. Caryn is one of the most professional players to ever play the game and she was a pure world class champion. I think she knew that the situation was out of my control and handled the situation like a pro. It was really unfortunate because Caryn's deal was very lucrative by racquetball standards. When the cut came down it had to be devastating to Caryn as a player. It was very unfortunate, racquetball could really use her talent and professionalism today.

Q: What was the transition like for you when Richcraft sold?
SW: After the Richcraft deal went south, I hooked up with Estusa. This seemed to be a good match since they wanted to build a new racquetball category from scratch and I wanted to broaden my racquet sports experience into tennis and squash. Jimmy Connors had just come off the US Open where he made it to the semis with a bright yellow Estusa tennis racket. The phone was ringing off the hook for that yellow racket. We also had the Boris Becker line and the Jahangir Khan squash line. I brought Obrem斯基 with me and we promoted him along side of Connors and Khan as he rose to the height of his game with Estusa's newly developed racquetball line. Each of these players was amazing, but to the public, Connors was the rage. He has a rock star's magnetism. Traveling with him was an amazing experience. Unfortunately, the Estusa deal started falling apart after only about a year and a half. I don't know if anybody will ever know exactly what really happened behind the scenes. A major factor was that when we couldn't deliver the yellow tennis rackets fast enough to meet demand, it killed our squash and racquetball categories. They died before we could get them into enough hands to build a solid base in the market.

Q: From there?
SW: After Estusa, I began some consulting for Fox tennis and did some key account sales for Transition racquetball. I also started my own sales agency selling Transition, Hi-Tec, Fox, Sergio Tacchini and fitness products. After my experiences with Richcraft and Estusa, I knew I had to build my own situation or become involved with one of the top companies in racquet sports.

Q: Hence the move to Prince/Ektelon?
SW: The position that would become my opportunity to join the Prince Sports Group came when they decided to transition Ektelon to their headquarters in Bordertown, New Jersey. It's very easy to see how we have become so successful when you look at the talent that makes up the company. When I first joined Prince, I worked with Rob Ahrensdorf as Ektelon product manager. We were a good team because he had great classical marketing skills and was a good manager and visionary. I had the relationships and knowledge within the industry. But we had to fight to stay successful. Dave Peck fought the battles in the field where everyone was saying that we were a tennis company that didn't care about racquetball. We made some mistakes by not changing our line during our first year. This added more fuel to the fires. We thought we were doing retailers a favor. The clear message we had gotten was that they were tired of wholesale Ektelon line changes every year. It was confusing to them and to their consumers. We also spent too much time concerning ourselves with the growth of the game when we were at our weakest point for competitors' attacks. We lost some market share during those two years, but we've gained almost all of it back based on the strengths of PowerWeb technology and our NFS shoes.

Q: You moved into the senior manager's seat by hitting the ground running with some bold ideas and innovations. The same has been true since your recent promotion to Director of Indoor Court Sports.
SW: When I became Senior Manager of Ektelon in April, I wanted to make sure that we aggressively attacked the market. We had a tremendous new product line.
What we were made of. I think we've to be better and which we will be bringing out

Anniversary Special

game, Andy Roberts, Drew Katchik, Japan. In addition to being the stars of the program, Michelle Gould and Cheryl Gudinas are all great players like Mike Guidry and Kelly Gclhaus who will eagerly travel to play in development from outside the racquetball industry. His incredible efforts on the first US Open could turn some things around for the sport. Luke St. Onge and the AARA staff all deserve tremendous credit since not many people know just how hard they work and just how much they really mean to the sport. I couldn't imagine where the sport would be without them. I've been fortunate to work with Luke, and with people like Jim Hiser Margo Daniels, Keith Caulkins, Van Dubolsky, and many others through the years.

Q: What individuals do you see making a difference in the game?

SW: I think first you have to acknowledge the huge things Hank Marcus has accomplished in building the pro game. He has built something big from what was a big mess. I have seen the pro game change so many times it's amazing. Hank has brought stability to the tours. Because of this, we have come on board as the official footwear sponsor of the IRT and WIRT. I realize that, even so, it is still on fragile ground. I like the maturity level of the pros I'm working with now - I think Hank is mostly responsible for that. We're lucky to have great players like Mike Guidry and Kelly Gelhaus who will eagerly travel to play in places like South and Central American and Japan. In addition to being the stars of the game, Andy Roberts, Drew Katchik, Michelle Gould and Cheryl Gudinas are all active clinicians. In fact, I've managed to pull in Andy and Michelle on more of the day to day business issues with Ektelon. The Boudmans have kept enthusiasm building in the sport for years. They are also behind some of our biggest innovations. Doug Ganim has been a great visionary and executor for the sport through all of the positive things that have come about in recent years. His leadership in Ohio and the AARA as well as his consulting work for some of our competitors is impressive. I look for some big things from him in the future if he can succeed in bringing in sponsorship from outside the racquetball industry. His incredible efforts on the first US Open could turn some things around for the sport. Luke St. Onge and the AARA staff all deserve tremendous credit since not many people know just how hard they work and just how much they really mean to the sport. I couldn't imagine where the sport would be without them. I've been fortunate to work with Luke, and with people like Jim Hiser Margo Daniels, Keith Caulkins, Van Dubolsky, and many others through the years.

Q: Any concerns about the way things are going?

SW: I'm definitely very concerned about the game at the club/grassroots level. I think we have to be working from both ends, the high visibility/portable court/ESPN route and grassroots/AMP pro/courtcub programs. It's easy to focus too much on one or the other, but the real growth will come from building both ends and using the success of each to fuel further success for the other. Racquetball needs hoopla and heroes, and it also needs programs that meet the needs of players to keep them playing, get them to play more, and encourage beginners.

Q: Looking ahead, do you see negatives or positives?

SW: I see positives, but not without a lot of effort and a lot of cooperation. Cooperation from within the industry as we have been putting together for the past year or so through the Sporting Goods Manufacturers Association, and the AARA, and support coming directly from the playing public.

Q: What is your message for the playing public?

SW: PLAY RACQUETBALL! Actively support the key initiatives with AARA, AmPro, RIA, the US Open, etc. The tennis community joined together to rebuild the sport several years ago through the TIA and some timely TV coverage of the pro game. Racquetball is now poised for the same type of occurrence. As the sport grows, it just gets better and more fun for everyone involved. LET'S MAKE IT HAPPEN!

From Scott Winters' early days of teaching and programming racquetball in Southern California.

Opposite: Winters on court in a match with Bud Muhleheisen.
Service with a Smile!

A few basic principles can take the stress out of serving.

By Fran Davis
U.S. National Team Coach

Effective serving capitalizes on an opportunity to hit from a perfect set up. If not unreturnable, effective serves should always yield a weak return that sets up an offense third shot. Still, serves require ball placement within a limited area. Unlike any other shot in a rally, the receiver need only cover the back half of the court. Covering a smaller area allows the receiver an opportunity for a good set up off a weak serve. This places the server in jeopardy from the onset of the rally. Since the serve often affects the outcome more than any other factor in a rally, it only makes sense to make every serve count. Serving effectively requires a firm command of the general principles of variety, timing and deception.

Variety

Just as a pitcher in baseball strives to eliminate the batter with a strike out or a weak hit that can be caught, so does the server in racquetball strive to eliminate his receiver with an ace or a weak return that can be put away. The pitcher yields fast balls, curves, knuckle balls, and sliders. The server pulls from an arsenal of drives, lobs, half-lob, and Z's. By maintaining variety, each keeps his opponent guessing. He keeps his receiver off balance and denies him any advance preparation or movement to the ball.

You can begin to add variety by altering the height, speed, and angle of each serve you already use. You can create infinite variations of the serves on which you already rely. Serving from different positions within the service box can add some interesting and unexpected angles. To further broaden your arsenal, you'll have to practice to gain proficiency at any serves you don't already use.

Analyze your opponent's preferences and weaknesses to determine which of your weapons to use. Test for weaknesses or injuries that limit effectiveness against various assaults. Capitalize on a weak backhand, weak lateral movement from a bad knee, etc. Analyze style preferences to see how to best throw off timing.

Service Checklist

1. Analyze your opponent
2. Develop a game plan
3. Vary your serves
4. Concentrate on weaknesses
5. Control the tempo
6. Deceive the receiver

Variety

As the server, you have (or should have) control of the match. Use that to your advantage. Just as a pitcher begins a sort of ritual on the mound from the time he receives the ball from the catcher, so too should the server in racquetball establish a ritual. It inspires confidence. It delivers a clear message to the receiver that you are in control. If you watch pros like Sudsy Monchik, Michelle Gould, Andy Roberts, and Cheryl Gudinas, you'll notice that they have very deliberate, methodical routines to prepare to put the ball into play. Your ritual and the security that comes from it will help to unbalance your waiting opponent.

Remember, work within your tempo, not your opponent's. Set the pace that makes you most effective while making him the most uncomfortable. Slow the pace against the shooters. Do this with more strategic shots such as lobs and Z's. Heat things up against the rest. Be aggressive with dives and wraps against those who prefer more time to set up. Bottom line, if you are serving, call the shots.
Serve from various positions in the service box.

Types of Serves

**Aggressive**
- Drive
- Jam
- Wrap Around
- Hard Low “Z”
- Overhead Hard “Z”
- Overhead Jam

**Strategic**
- High Lob
- Half Lob
- Lob “Nick”
- Soft High “Z”
- Three Quarter “Z”
- Off Speed

*Deception*

The pitcher’s windup is the same for every pitch. He never lets the batter know what’s coming until he releases the ball. Deceive the receiver with a similar motion for every serve. Give him no advance notice of your intentions. Becoming proficient with any serve from any position in the box helps you do this. A deceptive service motion will make the most of your work with variety and timing.

Improving these three aspects of the service strategy will help any player’s game at any level. Remember, like any strategies in sports, the concepts are only as good as you can execute them. It takes hours of practice to insure the shots are there when you need them. It takes planning and visualization to make sure you use your weapons to your fullest advantage. If you can master these strategies, you have the mind set to utilize the specific serves effectively as we discuss proper execution of each one individually in upcoming issues.

#5 January/March '92. Andy Roberts "Terminator" cover. Malia Bailey interview, photographing racquetball, equipment of the pros, Brian Hawkes Gallery, instruction and tournament coverage. $5.00.

#6 Sept/Oct '92. Mike Yellen cover. New format. Tim Sweeney interview, evaluating a string job, Mike Yellen profile, instruction and tournament coverage. $5.00.

#7 Nov/Dec '92. Drew Kachtik "Chain-shot" cover.

#8 January/February '93. Ruben Gonzalez cover. Ruben Gonzalez profile, tennis elbow, Gregg Peck's basics, instruction and tournament coverage. $5.00.

#9 March/April '93. Cliff Swain cover. Cliff Swain interview, a look at racquets, eating for performance, instruction and tournament coverage. $5.00.

#10 Summer '93. Marty Hogan/Charlie Brumfield cover. Special instructional issue. Evolution of the racket, Strandemo, Dynamic Duo, America's Most Wanted, Heflin on climbing the walls, tournament coverage. $5.00.

#11 September/October '93. Andy Roberts VCI cover. Racquet warranties, nutrition, U.S. & Canadian amateur nationals and Junior nationals, rotator cuff injuries, tournament coverage and instruction. $5.00.

#12 Winter '93/94. Tim Doyle cover. Tim Doyle profile, target training, game styles, attacking your opponent, tearing down the walls, 3rd annual buying guide, tournament coverage and instruction. $5.00.

#13 Winter '94. Mike Guidry cover.

#14 Summer '94. Mark Wentura cover. Common sports problems, industry news, preparing for a weekend tournament, strings and grommets, preparation. Mark Wentura interview, national champions. $5.00

#15 Instructional '94. Cliff Swain cover. Cliff Swain profile, dominating rallies, instant improvement, stringer log, Bi Rak IT, grading the pros. $5.00

#16 Fall '94. Spalding Racquet cover. Overview of racquets, playing better with age, core players of the IRT, control through preparation. $5.00

#17 Winter '95. Heroes cover. Who's the best, Improving your doubles game, eating and performance, warming up properly, shot selection. $5.00

#18 Winter '95. Aaron Katz cover.

#19 Summer '95. ESPN TV cover. Racquetball on TV, interview with Jerry McKinnis, lower back pain, instruction, tournament coverage, concept training, Racquetball & the rest of the world. $5.00

#20 Fall '95. Penn Ball Cover. Forehand and backhand strokes. Grading the pros. Tour coverage. Survey results. Dictating play. Sprains. $5.00

#21 Instructional '95. Sudsy Monchik, Cliff Swain cover. Taking risks to win. Heart and lung function. Power overhead. Ten things to teach yourself every week. Penn ball story. Shots of the game. Egan Inoue signature racquet. $5.00

#22 Winter '96. Cliff Swain Cover. Concept Training, Personal Trainer, Journey to the Center of the Court, Dan Obremski signature racquet, Stress and strain injuries. Tour coverage. $5.00

#23 Spring '96. Andy Roberts Cover. Luke St. Onge interview, Andy Roberts Interview, 36 things to never forget, Steroid use in athletes. KILLSHOT Cafe, Passing shots, Outside looking in, Tour coverage. $5.00

#24 Summer '96. Sudsy Monchik Cover. Sudsy Crash Course, Deliver with a Purpose, Personal Trainer, US Open Info, Natural Selection, Grading the Pros. KILLSHOT Cafe. $5.00

Anniversary Special
If the Shoe Fits

Ektelon has been named the official footwear sponsor of the IRT and the WIRT. Their new NFS (Natural Foot Shape) performance line delivers lightweight traction with a durable gum rubber outsole. The shoes feature nylon quarter support straps and a thermoplastic heel counter to provide the rugged stability to hold up to the demands of racquetball.

Web of Power

For 25 years, Ektelon has captured racquetball's biggest market share through innovative technology. Continuing in that tradition, they have introduced the new PowerWeb racquet technology. Featured on Ektelon's new Power Ring and Power Ring Lite racquets, it features a frame design which creates uniformly longer main strings to deliver a 25% power boost. The two frames are the flagship of the new line of Ektelon racquets that includes a variety of models and price points. Six of the new frames incorporate Ektelon's WallBEAT-ER bumper, which (according to early testing) reduces the shock of wall hits by 70%. The Whisper Damp frame features new DoubleBridge technology and claims advanced vibration dampening.

Holding the Bag

Head Racquetball has signed an agreement with the IRT and the WIRT to produce the Official Racquetball Bag of the tours. We will get our first glimpse of the new IRT bag line by Head at the Sporting Goods Manufacturer's Association Super Show in February in Atlanta.

Seein' Green

After the overwhelming success of the inaugural U.S. Open Racquetball Championships the AARA has adopted Penn's ProPenn green ball as the official ball for National and Regional tournament play. Professionals and amateurs both competed using the Pro Penn green ball for the first time at the U.S. Open.

The ProPenn green ball was developed in 1994 in conjunction with the IRT for tournament play. The ball was designed to provide better and more consistent play and claims better visibility than the blue ball.

The Penn Ultra Blue isn't going anywhere though. It will continue to be the official ball of the AARA.

Penn and the IRT have signed an agreement naming the ProPenn green ball as the official ball for the IRT until 2001.

Penn Pals

In another move solidifying the bond between Penn Racquet Sports and the IRT the #1 ball producer in the country is producing a new Pro Penn glove line. The two top-of-the-line models feature exclusive lycra padded fingers for wall and dive shots and Terry cloth wipe on the thumb and top of the hand. Both gloves are made of hand-selected, premium grade Cabretta leather—one of the finest glove leathers in the world.

The agreement names Penn's Pro Penn Tackified and Pro Penn Cabretta gloves as the official gloves for the tour for three years.

Stringin'-A-Long

After the success of last year's long string technology in the Chaos and Havoc frames by E Force, the San Diego based company has once again lengthened its main strings. The Mayhem, released for the current playing season, takes long string technology even further—to a whopping 20.5 inches for the eight center main strings. The mains run from the frame tip to the bottom cap of the handle. The added length is intended to increase power much the same way as a longer bow string increases power for the archer.

The new Stealth and Weapon gloves have brought E Force's accessory line into the same high tech realm that the racquet line has already reached.

A group of Pro Penn green balls awaits the addition of the logo and packaging at the Penn manufacturing plant.
The String is the Thing

High tech meets old world craftsmanship at Ashaway

Ashaway may be old but the company is far from old-fashioned. It has been responsible for some significant technical innovations, including the first use of nylon in a commercial product (1939) and the first use of Kevlar® in a racquet string (1977).

According to Crandall, the manufacturing process begins by twisting together strands of yarn to produce the “core” of the string. Ashaway purchases five-pound bobbins of yarn from chemical companies like DuPont, and loads dozens of these onto twisting frames. Several strands of the hair-thin yarns such as Kevlar® or Zyex®, are led across rollers, through guides, and onto an empty bobbin near the bottom of the machine. This bobbin spins at several thousand rpm’s and when full holds about 3,500 feet of twisted core.

Elongation and resiliency is controlled by varying the number of twists put into the yarn for each inch of core produced. Subtle, yet sophisticated measures such as this, and careful selection of the chemical polymers that make up the yarns, are what string makers use to engineer different play characteristics in their string.

When twisting is complete, the core is transferred to the braiding mill where antique braiding machines put “jacket” layers over the cores. Each braider has several small bobbins, arranged in two concentric circles. The core strand passes through the middle of the circle, and the bobbins do a fast and furious dance around the core. Half of the bobbins run clockwise, and half counterclockwise, constantly exchanging places on the inside and outside circles. In this way, the yarns for the covering layer are woven together over the core.

Through fine adjustments in machine set-up, the manufacturer can engineer subtle differences in the construction of the jackets, which again change the playing characteristics of the string. For example, the braid can be relatively open to provide more texture and “bite” to the string, or relatively closed, to provide more protection to the core, for greater durability.

In spite of the speed at which the bobbins rush around, braiding is a slow operation, jacketing only about 30 inches of racquet string per minute. Subsequent processes happen a lot faster. The braided string is then given a coating to bind the fibers together and reduce abrasion. The string is drawn through a coating bath, and then, running over pulleys, it shoots 40 feet up into a drying tower. The string may go through this process as many as six times to apply the right amount of coating.

The string then goes to a computer-controlled ink-jet printer that silently prints the Ashaway name at 3,000 inches per minute, then dips quickly through another, different coating bath to make it easier to string into racquets.

The string runs off the drum a final time and is inspected for flaws, then it is metered off and cut into appropriate lengths -- 36 feet for single racquetball sets, and 360 feet for reels. Then the string is packaged and shipped.

Superficially, string seems to be a simple product but it is actually a highly refined, technically sophisticated piece of sporting equipment, and each manufacturing step is necessary to produce the final product. The process is complex because it has to be.

So, while string may seem basic, players have learned that details of string design and manufacturing can significantly affect court performance. String is, in fact, anything but basic; it is an intriguing mixture of technologies, where sophisticated polymer chemistry combines with 90-year old processing equipment. While the basics of line-making haven’t really changed in all that time, Ashaway has continually refined and upgraded the process, and the materials that go into it, so that its racquetball strings are as high-tech as anyone could desire.

Above: On the twisting frame, thin strands of high-tech yarns like Kevlar® and Zyex® are carefully twisted to produce the core of the string.
Left: The wear layer, or jacket of the string, is produced on braiders: although these are about 90 years old, they’re still “state of the art.”
Racquet Science

Basic physics teaches us that there is a balance point for every racquet. As that point moves closer to your hand, the racquet swings faster. Farther from your hand, the racquet swings slower.

Of course, higher racquet speeds mean greater ball velocity. But it also means that if you hit the ball too late or too early in your swing, you can change your balance point to hit the ball in the optimum "midpoint" zone in each swing. The result is more power with better control than ever before.

Even though it's basic science, only Gemini offers the technology to customize the center of gravity for each frame to make every shot better...lots better.

As the president of Gemini Racquetball, I feel my reputation is on the line with each racquet that leaves our Richmond, Virginia headquarters. That's why it's important to me that each player receives the racquet that offers the best combination of weight and balance to play to the top of his or her potential. To make this happen, Gemini offers customized, powerful racquets, the knowledge and experience to perfectly match them to your individual swing mechanics, and a commitment to service that is the most personalized in the industry.

Gemini doesn't sell through discounters or middlemen or pay professional players to endorse racquets. We work with individuals who want the perfect weapon to play better racquetball. I personally guarantee that the experts at Gemini can individually fit you with a racquet that will improve your game. It is my belief that once you own a Gemini that has been customized for you, you will never play with anything else.

Ron Halloran
President

Call today. We'll build one for You!

The space age frames of the Triple Balance Series deliver the optimum measure of power and control in a light, mid, or heavy frame. Balanced head heavy, head light, or neutral to suit the unique swing characteristics of each serious player. Combat-proven in national level competition, they make the most of any player's potential.

The new Power Wave by Gemini employs powerful and innovative new WAVEX technology by adding mass and stability to an enlarged sweet spot. The revolutionary WAVEX frame configuration offers unmatched power while naturally minimizing racquet head vibration. The Power Wave comes customized to your ideal balance and weight and carries the same unbelievable commitment to quality and service as the original Gemini Triple Balance series.
