AMF Voit introduces the Pacer. At close to $100, the price tag is not expensive. The racquet is.

Pam Osserman. Or one of a dozen other specially selected craftsmen who shape and string the lightweight Pacer.

The Pacer’s design is light years ahead of the competition. A unique variable width frame puts reinforcement precisely where computers show most players put stress.

Our floating throat-piece and polyurethane foam handle are two more patented exclusives.

They reduce vibrations from the strings. So the racquet feels extraordinarily smooth in your hand.

EXTRA STRENGTH ADDED TO STRESS AREA.

Just as innovative is our quadraform head shape. We developed and perfected the slightly squarish shape that gives our racquet flexibility.

And kill power.

The Pacer may easily cost twice as much as the racquet you’re now playing with. But once you play with pure fiberglass, handmade no less, the Pacer won’t seem expensive.

Other racquets will seem cheap.

Santa Ana, California 92704

THE NEW PACER
Enjoy The Rich Thick Touch Of The High-Performance Equipe Sock.

Try the moisture-absorbing thick lightweight knit of Burlington Equipe Socks. Land on the shock-absorbing heel, sole and toe in Hi-Bulk Orion. Stay neat and comfortable with the stay-up top. Keep things fresh for the life of the socks, they're Bioguard: The Odor Controller sock with the green stripe. And get the Burlington unconditional money-back guarantee besides. Available in crew and tube lengths.

THEN SQUEEZE THE MOST ELITE EQUIPE...
CLINCHER: You get all the regular Equipe features. Plus "power panels" that support arch and ankle. And prevent slip-and-slide friction. And the unique wicking action of Hi-Bulk Orion that pulls moisture out; keeps your feet dry. Available in crew, runner and over the calf lengths.

START with a squeeze. END with the most comfortable, most protective, most practical sock you've ever worn, game after game after game.

From Bob Kendler

Stories that Are Made to Be Told . . .

Three Ways of Looking at College Racquetball.

If you don't believe the first story, try the second and the third. I am going to tell all three just as I heard them.

Bob Troyer is the math professor at Lake Forest College. He is also a heck of a racquetball player. I might add he's a heck of a tournament player. We are also happy to report that Bob Troyer is a heck of a math professor. Apparently his devotion to mathematics knows no bounds, even to the extent of using racquetball as a weapon. Believe it or not, good ole honest Bob Troyer insists, with a straight face, that there is a tie-in between learning racquetball and learning math. Not having any formal education, it's not for me to dispute his claim. I know for sure that he wins a lot of tournaments around Lake Forest College, and he always has a dullard at his side. Strange as it may seem he is always able to turn them around and I can point with pride to the success Troyer Trainees have in business. Some even in racquetball. Some in handball. Some as national champions. Weapon? Racquetball!

Now don't start telling your friends that I said to be a winner, I recommend math and Bob Troyer. I wouldn't even recommend Bob Kendler. But I must confess, racquetball is having a profound influence in education. Students find it brings them closer to the faculty members, and the reverse is equally true. Both of them find it's a remarkable social outlet for faculty members, their peers and their pals. It's a brand new boiling pot, a homemade stew that finds us all in the same kettle, surprised at how well we improve each other's flavor!

Now for the second story, I just told you that racquetball "builds" intelligence; now I would like you to know it also builds schools at places like Lake Forest College, where Athletic Director Mike Dau has encouraged the institution to expand and improve sports facilities like handball/racquetball courts.

You know why racquetball and handball are now so prominent in the recreational budgets of our universities? They are the least expensive of any sport to play and the most persuasive in promoting lifetime associations with friend, faculty and facility. Have you ever forgotten the first place you played racquetball or handball? I haven't! It was in the hayloft of a fire barn. Have you ever forgotten the first people who taught you? I haven't. I count my handball days and handball friends as the dearest of all. I have never doubted the court sports helped to keep me alive.

Along with my friend, God, and college coaches like Mike Dau, the University of Texas at Austin's Pete Tyson, the University of California at Berkeley's Jim Turman and the University of Cincinnati's Vern Roberts, Sr.

I don't want to get away from the second story. It's real simple. The way schools are installing racquetball and handball courts, it's clear that they realize the students find "higher recreation" an easier way to "higher education." Even the confirmed athletes find it puts a polish on their abilities. If great football or great basketball is important to them, handball and racquetball will condition their team like no other sport. It's fun exercise, not work-exercise. It's just as simple as that. Anyone can easily afford it, can easily mix, and the sports require no special skill to enjoy.

In March the University of Illinois will host the USRA Intercollegiates. Last year players from 37 colleges and universities from coast to coast took part. Memphis State University has stolen the front page in racquetball with the country's best program, and it attracts students because of its program. The Universities of Illinois and Colorado have excellent racquetball facilities, and even though they don't have organized competitive programs like Memphis State, students choose those schools because they have free access to racquetball. We can thank people like Jack Gillespie who is a legend in handball, and Bill Tanner who is equally famous in racquetball. To them belongs the success story of Memphis State.

Let me just add a third dimension, and I thank Howard Kessler for this message. He speaks with authority as he heads the architectural firm of Kessler, Merci & Associates, leaders in the recreational design field.
With every step you take. And with every shot you make, your body is in constant motion. Bending. Extending. And pounding itself. So forcefully, that sometimes the stress can be a little too much for a body to handle.

That's why Scholl developed Pro Comfort. A complete line of athletic accessories designed to comfort, brace, and protect your joints, muscles, and feet from the hard knocks of competition.

Like shock absorbing Sports Cushions.™ The patented Runner's Wedge.™ And a selection of pads and supports to fit every need. Each evaluated by a staff of professional trainers.

Pro Comfort by Scholl. It'll put you and your winning game back in motion.
"Due to the concerted efforts of some specially interested groups throughout the Chicagoland area, a new lifestyle philosophy has begun to emerge among young people. It has to do with their introduction to innovative athletic activities through parental example. Fifteen or 20 years ago Chicagoans (as well as other winter belt residents) began to search for relief from the confinement traditionally dictated by the snow and cold. The YMCAs and school gyms were the first to offer relief, but the facilities were limited. At this point several enthusiasts of the good life through physical conditioning (Bob Kendler, for one) began a PR campaign aimed at producing major indoor facilities capable of inspiring participation. The result was a mass orientation toward conditioning. It developed into an interesting situation... young people liking the sports their parents were playing, and parents thrilled that their children were enthusiastic about participating. Both discovered immense benefits. (In my case three sons play handball, and my grandson, Jon, won this year's National Juniors Handball Championship at Memphis State University.)

"We are referring to the Park District, YMCA, municipality, school and private club facilities that have presented innovative recreationally oriented games to the public for the last 15 to 30 years. Considerable support comes from allied associations, recreational consultants and interested independent volunteers.

"The innovative athletic activities are basically those that take place in an enlivening, fast, 20 by 40 foot, handball, still a vital growing sport, started it all, but the creation of the game of racquetball has added a dimension that has nurtured a love for physical conditioning in young and old alike.

"Racquetball really threw out the age barriers that sometimes discourage and inhibit. It is not necessary to practice two to three years before one can play a creditable game and have fun doing it. As a result a feeling of accomplishment encourages six to eight-year-olds, as well as 60 to 70-year-olds, to become involved. Once they are into exercise, they develop the feeling of well being that is the general result of body conditioning. Inevitably a goodly number will play a handball game now and then, or join an exercise class sponsored by the club or group and will generally strive to upgrade their overall physical makeup because they are now aware of the benefits. Truly the relationship of increased mental capacity through physical conditioning is instinctively an awareness.

"Those with inherent high mental capacity find that exercise and fitness stimulate mental activity. Obviously blood circulation is improved, but this feeling of well being dissipates stress and anxiety that have been known to stifle mental effectiveness and accelerate the aging process. This explains why the sports enthusiasts discipline themselves to keep in condition... Average and lower mental capacities have been shown to improve in efficiency with greater cardiovascular activity, nerve and muscular conditioning brought on through exercise. Observation and experience constantly demonstrate to all age groups that mental ability is the key to increased earning power.

Now I agree with Howard Kessler. It is certainly reassuring to feel sharp at exam time!

And I concur with Kessler that people who learn to play racquetball in college will pass that active athletic lifestyle onto their children, who will "place such importance on stimulating athletic involvement that they will choose a college and their place of employment or residence only if athletic recreational facilities are nearby." Kessler, Merci & Associates have been commissioned to perform the architectural engineering services for new student recreation buildings at Loyola University in Chicago, Northern Illinois University at DeKalb and a physical education and recreation building for Northeastern Illinois University in Chicago. In the competition for new undergraduates colleges and universities feel the necessity to have these facilities.

Though we still have a long way to go, we believe that the athletic conditioning philosophy has been an important factor in helping stabilize the younger generation. It is our belief that self pride derived from physical conditioning and the stress eliminated through active fun competition can keep young people in college and lead them into productive lives.

For your stories Thanks Troyer! Thanks Daul! Thanks Kessler:

Evie and Bob Kendler

Do not err, my beloved brethren. Every good and every perfect gift is from above, and comes down from the Father of lights with whom there are no variables nor shadows of turning.

James 1: 16, 17.

From the National Commissioner

Thirst Quencher—Official for 1981

We are happy to announce that the United States Racquetball Association again has selected Wagner Thirst Quencher as the official drink for its sanctioned tournaments.

This is the second year the USRA has endorsed this product that has a fresh tangy taste for an extra lift for an active athlete. Pro and amateur players have been enormously enthusiastic about Wagner's. They've agreed that Thirst Quencher gives them high levels of energy.

Wagner Thirst Quencher, found nationally in supermarkets and grocery stores, replaces more than twice the body minerals in total than any other liquid previously marketed.

Dr. Barry Homier, technical director of the Consumer Products Group of A.E. Staley Manufacturing Company, developers of the product, says Thirst Quencher has twice the amount of potassium and more sodium than its leading competitor and that it's made to be easily absorbed into the body.

Wagner Thirst Quencher also contains high amounts of glucose and high fructose corn syrup. Glucose, found in other thirst quenchers, allows for the rapid absorption of the liquid, giving a player a quick shot of energy. However Wagner Thirst Quencher is unique in that it contains high fructose corn syrup, which has a slower rate of absorption—a "time release"—to sustain energy. Homier has explained that "during a strenuous racquetball match, the ingredients—including a high level of potassium—"in Wagner Thirst Quencher not only stimulate muscular activity for quick energy, but also make it easier to maintain a plateau of energy for the duration of the match."
YOU'RE READY FOR THIS RACQUET, BUT YOUR COMPETITION ISN'T.

OMEGA'S GALAXY 21.

One look says Omega isn't offering you "just another pretty racquet." This one is different. Dramatically! In fact, the Galaxy 21 is the most technologically advanced racquet in the game. From bumper strip to butt cap, the Galaxy 21 boasts more performance-enhancing properties than any other racquet on the market today. The most remarkable difference is in the stringing pattern. It's unlike anything you've ever seen. So distinctive its patented (U.S. Patent #4184679). The exclusive MadRaq™ stringing damps vibration better than conventional stringing methods. Traditional right angle stringing disperses ball impact in only four directions. Galaxy's stringing distributes shock in six directions, four ways diagonally and two ways vertically. Thus, you can play "all out" racquetball with substantially less shock transmission to arm, elbow and wrist.

But the secret to a better racquetball game is to mix kill shots with finesse to catch your opponent off guard. And finesse is yours with the Galaxy 21. Why? Because the unique stringing pattern gives you a better bite on the ball. You get better ball control, more topspin or slice when you need it. Sound good? Hold on. There's more! Galaxy 21 has no throatpiece; another engineering design plus to create a lighter, "quicker" racquet. Only 240 grams. You'll swing through the ball faster. (And you won't tire as rapidly.)

Ah, and now the frame. Shiny black metal; quadrangular shape. Pin striped in red and technologically advanced by virtue of its "solid state" construction. The frame extends all the way to the butt cap (which is an integral part of the frame under another patent). The result is further shock absorption and vibration dampening. Beneath a rich silver embossed leather grip, the handle is permanently bonded around the frame to form a total unit. The result? A super strong racquet—so strong it carries a 5-year warranty. No other warranty compares. There you have it, the sound technical reasons why you should own this engineering marvel. You're ready for this racquet. But your competition isn't.
USRA/NRC President Bob Kendler, seated, puts the association’s official endorsement on Wagner’s Thirst Quencher for Ben Bartolini, left, brand manager of A.E. Staley Manufacturing Company, Consumer Products Group, and Mike Barnett, right, the group’s manager of sales-administration. Joe Ardito is also on hand.

Wagner Thirst Quencher was developed with the consultation of Dr. Theodore Sherrod of the University of Illinois Medical Center Department of Pharmacology.

Wagner Thirst Quencher will be dispensed at USRA sanctioned state and regional championships as well as at the stops on the National Racquetball Club pro tour.

Porter is a veteran when it comes to hosting National Racquetball Club and United States Racquetball Association major tournaments. He is a master at providing an atmosphere in which players and spectators enjoy themselves.

Porter stated in 1979 that “we hope to be selected as host of the Nationals again in the future and the only way we can guarantee that is if the players want to come back.” Well the future is now and the players do want to go back to Tempe.

With the great fan support and the superb cooperation of the Arizona Racquetball Association (ARA) we expect even greater things to happen at the 1981 Nationals.

Entry forms and information on prizes, awards, souvenirs, hotels and tickets will appear in the April and May issues of National Racquetball. Remember Super Savers air fare tickets are available now, and you can enjoy tremendous savings if you plan in advance with your travel agent or airlines.

If you were in Tempe in ’79 you’ll be glad to be back. If you weren’t, you have a treat in store. Make your plans now so you, too, can experience the Nationals—Tempe Style.

See page 42 to learn how an Open division USRA Regional win can pay off in travel money to the Nationals. ED

From the NRC National Director

Tempe for the 1981 Nationals

Back by popular demand the Phoenix Sunshine and the Arizona Athletic Club, called the racquetball’s finest Nationals site by many, will serve as hosts June 6-13 for the Leach ProAm National Championships, co-sponsored by Seamco, Inc. and sanctioned by NRC/USRA.

The shouts of “Remember Tempe!” could no longer go unanswered. Everyone who remembered 1979’s Nationals thought about the swimming pool, lounge/disco and large gallery area as well as the outstanding hospitality. And in response to most player opinion the NRC/USRA has decided to combine the event with the pros once again to allow everyone a chance to share all the excitement.

“We’re taking the responsibility of hosting the Nationals very seriously,” says Carl Porter owner of the Arizona Athletic Club, located in Tempe, just outside of Phoenix. “We intend to have every participant leave the tournament feeling that he or she had a great time and that their money was well spent.” Nobody will get short changed.

Halas’ Bear
Dear Evie and Bob:

Your January editorial is magnificent. This is a message that must be brought to the attention of all, young and old.

Society’s disregard of belief in and respect for a Spiritual Being and one’s fellow man alarms me. If you do not have one, it is impossible to have the other. If our entire judicial system used just the two quotes from the Old Testament, which you included in your article, the law books would be the slimmest books published and the wisdom of the universe would be contained between its covers.

I was very moved when Vince Evans dropped to his knees on the playing field, but I was not surprised. I became well acquainted with this remarkable young man and his family when he was ill. At the time I met his mother I knew all I needed to know about Vince. He is his mother’s son. Though I have not had the pleasure of meeting his father, I understand the teaching Vince received from his parents is equal.

I have great respect for Vince Evans. He is a man of stature and he is a splendid athlete. My faith in him as a creature of God and an athlete is total. I am so proud and pleased that the Good Lord saw to it that our life’s paths crossed. He is my Bear in every sense of the word.

Thank you for writing this article. I am going to send a copy to Vince and to his parents. This article must be shared with them. Also I intend to see that your article reaches many hands.

George S. Halas
Chicago, IL

Setting Eyeguard Standards
Dear Carol:

National Racquetball is to be commended for many of its articles over the years and the magazine’s stress on eye protection in racquet sports. It is my opinion, at this point, that anyone not wearing eyeguards is ill advised. With experience, as one becomes more competitive, one follows the ball more closely and consequently the risk of eye injuries appears to be just as high after 10 years of experience as after a year of play.

Being a squash player myself, although playing some racquetball, I can see why Heather McKay wears eyeguards in racquetball and not in squash. Although she’s much more familiar with squash, it is my opinion that the main factor she considers is the recoil effect of the ball off the wall, an incredible sight in racquetball.

The Canadian Standards Association has formed a committee, of which I am task

Beautiful Sport
Dear Editor:

I would personally like to thank Mr. Kendler for his article “A New Thought for the New Year.” In today’s world so often our God is someone to turn to just in times of trouble. Your message was that He is always with us and we should give Him the honor and glory He deserves.

Thank you for expressing your faith openly through the beautiful sport of racquetball.

Bob George
Dodge City, KS

USRA Regional win can pay off in travel money to the Nationals.
Racquetball requires strength, flexibility, muscular endurance and cardiovascular ability. All of which can be produced by a small amount of proper training with full-range exercise. Only Nautilus provides the means and scientifically based training concepts capable of meeting these demands.
force chairman, to set standards for eyeguards. We have agreed unanimously that any guard must prevent the eye from touching the racquet or ball, but there are many other factors we are considering.

We welcome input from players—both squash and racquetball—from both sides of the border.

Michael Easterbrook, M.D. F.R.C.S.(C)
Toronto, Canada

You can write about your experiences with eyeguards and send suggestions to the eye physician and surgeon at 1849 Younge St., Suite 303, Toronto M4S 1Y2.

More Soccer in the Court

Dear Carol:

Thank you for including Court Soccer in your court games article. More than 30 clubs—mostly in the midwest and east—wrote us after reading about the game in National Racquetball last October. You might be interested in knowing that Harry Bald, head coach of the North Torrance High School team, is adding variety to his team's practice by having members play Court soccer one day a week at a local club.

Lee S. Jones
Santa Ana, CA

Shooting down the Stars

Dear Sirs:

Regarding the December cover—okay, I think this is enough trying to glorify the cover with movie stars. In the beginning we may have needed this method of calling attention to our sport. Now I think we can make it on our own merits. Let's show racquetball players on the cover and write articles about racquetball for racquetball players. If we want to know about Judy Norton-Taylor, we can pick up a movie magazine.

Mike Palmer,
Carmichael, CA

Racquetball Poet

Dear Sirs:

Enclosed is my poem, "The Shootist," a takeoff on Kenny Rogers' "The Gambler." If you feel other racquetball players would enjoy reading it, please feel free to use it in National Racquetball.

Kathy Baker
North Manchester, IN

Readers will find "The Shootist" on page 42 in our USRA amateur section.

ED

Missing Shot

Dear Ivan Fuldauer:

I really enjoyed your article in the October issue of National Racquetball "Shots that Stick to the Wall." I am thinking of getting a few posters to decorate my room in the dorm. I really liked the color poster of Marty Hogan that appears on pages 16 and 17. The lettering on the bottom of the poster reads: Japan Racquetball Association 1980. Could you please tell me where I can obtain this poster?

Craig Nishizaki
Sacramento, CA

Our sources tell us that particular poster is not available.

ED

Thanks from Durango

Dear Carol:

Just a note of thanks for your recent article about the Court Club of Durango in the December issue of National Racquetball.

Roy H. Solomon
Durango, CO

Kangaroo Second

Dear Carol:

In Dick Squires feature of racquetball in New Jersey he erroneously talks of the Kangaroo Courts as the first facility. Bob Leckie, a noted author of religious books and also some sports books, put together the first club a decade ago at Tierney Rd., Lake Hopatcong. Bob had tired of the heavy turnpike traffic when going to and from his handball play in Manhattan and decided to alleviate the situation by building his own club. His initial effort included three racquetball/handball courts and two squash courts. Later he added three outdoor r/hb courts. Then after such experimentation with participation he remodeled and now has seven indoor r/hb courts.

His club has the homespun club atmosphere with congenial food/beverage service.

Mort Leve
Scottsdale, AZ

Selective Sharing

Dear Kendlers:

I was skeptical when I won a subscription to National Racquetball last April because I doubted that there would be anything of interest in it for a very new player.

I've been pleasantly surprised. The instructional section especially holds my interest and has expanded my vocabulary (drive, pass, Z serve, dink) if not my racquetball prowess.

I have been passing on old National Racquetball copies to my racquetball partner, but as I lose more and more games to her, I can see that has to end, or else I'll remove the instructional section before letting her read all about ceiling shots (puff, puff) and such.

Thanks from a converted skeptic.

Judi Myers
Pinedale, WY
“If you want the best in Racquetball... Head has it all!”

Steve Strandemo, Head Racquetball Touring Professional/Instructor, says, “Pick the racquet that suits your game and let Head quality engineering do the rest.”

HEAD METAL RACQUETS. The PROFESSIONAL® is used by more Head Touring Pros for its outstanding power and control. It uses high-strength aluminum for devastating power. The MASTER® is made with a lighter, more flexible aluminum extrusion for superior racquet control and quickness.

HEAD COMPOSITE RACQUETS. The GRAPHITE EXPRESS® racquet combines graphite and fiberglass for strength, lightness, and unbelievable power. The ENDURO® has an aluminum reinforced fiberglass core construction for power and durability. Both feature the open throat design that reduces twisting.

HEAD RACQUETBALL BAGS. Specially engineered for travel and small lockers, Head Bags are available in navy blue and chocolate brown. All are washable and contain wet-pockets.

RACQUETBALL ACCESSORIES. Look to Head for the best in accessories, too. The Head racquetball shoe features a canvas-and-mesh upper molded to a skid-resistant crepe rubber sole. The Head Plum® ball and deerskin gloves add to your enjoyment and skill. Our eye guard adds to your protection. See your authorized dealer for equipment that will help you play your best.

We can make a difference in your game.
The Thrill of the Crowd

With No Distractions

King’s Court Unveils Three Walls of Two Way Glass That’s Both Opaque and Transparent

by Ivan Fuldauer

Jerry Turco, a New Jersey builder and road contractor, threw away the checkbook when he got three-quarters of the way through the construction of his newest venture, the King’s Court, in Lyndhurst, NJ, the first racquetball club anywhere with a Twin-Vue three-wall glass exhibition court.

“Everyone wants to test it. I think all the top names in New Jersey, New York and Pennsylvania have been here. We’re expecting Marty Hogan to stop by the next time he’s in the New York area. We’ve even had people from Canada, England and other European countries visit us just to see the exhibition court.”

What’s the player’s reaction to the Twin-Vue glass walls?

Glenn Sorrentino, King’s Court’s head pro, says “it’s much better than clear glass. I can see the ball better. There are fewer distractions along the side walls. The ball stays in play much longer. Though the ball sticks to the glass a bit more, slowing down the game, there’s more action because of the longer rallies.”

Like a Hard Wall

Melanie Taylor, formerly of Chicago and now of Upper Montclair, NJ was impressed with the Twin-Vue glass because “it plays like a regular hard wall surface.” Taylor, who has competed on the women’s pro circuit, noted she got “great Z serves. And I had no problems with the ball in the deep corners where you normally have problems.

“Twin-Vue helps both the spectators and the players. Spectators appreciate the longer rallies and the gets. For players it’s fairer. There’s better depth perception. You don’t lose the ball for a split second, the way you do with clear glass.”

Though strategy and shot selection will remain fundamentally the same, Taylor says, “Twin-Vue glass will definitely be to the advantage of the control player. It may even change the game. There’ll be longer rallies.”

Fran Davis, also of Upper Montclair, one of the most talented players along the eastern seaboard, found the Twin-Vue court to be “a hundred times better than three wall clear glass courts I've played on, because of the better visibility. There aren’t any distractions. Twin-Vue is easier to adjust to than going from a white, solid side wall to clear glass. No adjustment whatsoever. Oh maybe 30 seconds.”

What makes Twin-Vue glass so unique? Players see opaque walls, even though they’re surrounded by spectators viewing the action through what seems to be conventional clear glass. About the only visual feature that differs for spectators is Twin-Vue’s grayish patina instead of the sickly green that is the trademark associated with clear glass.

Barking Twice

Charlie Brumfield, the longtime champion who preceded Marty Hogan’s reign, gets a laugh at his clinics with this line about three walls of clear glass:

“You need a seeing eye dog that barks twice for a pinch shot and once if it’s down-the-line.”

Brumfield says his first encounters with glass were “disquieting” because “I couldn’t follow the flight of the ball... Virtually everyone who grew up without the glass didn’t learn to follow the ball out of the racquet... We looked at the target area.” When that target area affords clear view of moving spectators or a darkened bar area and you’re hitting a ceiling shot, “the ball disappears,” Brumfield explains. He puts clear glass in the same category as the faster ball as an influence on today’s style of racquetball play. “It gives a big advantage to the player shooting hard and accurately from the back court. It keeps a player like me, who has good front court coverage, from flowing in and cutting off the ball at the last instant.”

But Brumfield recognizes the need for glass. “It changed racquetball from a spectator sport. And the new glass sounds like another stride. I look forward to playing on it.”
How is this accomplished? Falconer Glass Industries uses Twin-Vue's patented process to apply millions of black and white dots to the clear glass during manufacture. The players see the white dots, which gives the effect of a white wall, while the spectators see black dots. They see the action clearly. The dots are indistinguishable except close up. In short you have to look for them to be aware they're there at all.

Better Depth Perception

Ron Haber, W&W International's president, believes that some court club owners will eventually convert their clear glass side wall courts to Twin-Vue to overcome player's objections to the depth perception problem associated with courts walled with clear glass.

"Players tell me they have trouble telling where they are in relation to the wall when playing on clear glass courts. Sometimes they think they're a foot away from the wall when they're right on top of it. On the other hand they could be two feet away."

"More important perhaps," says Haber, "is what Twin-Vue will do for television."

"First of all Twin-Vue makes it easier to focus on the players. A camera shooting though clear glass on a multiple glass wall picks up the crowd through the other wall. Then, too, clear glass often produces ghosting—a second greenish image next to the player. Twin-Vue eliminates that."

"Another important advantage of Twin-Vue is that it makes shooting through the front wall practical. A clear glass front wall is just not playable. A fourth benefit of Twin-Vue is that it requires less light. Less light escapes through the glass—the white dots recycle the light back into the court."

Mark Pickering, an executive with Ellis Pearson Glasswalls, Sheffield, England,
agents for the Twin-Vue system, flew over to New York from London to view the world’s first installation of the company’s product on a three wall court. He believes that the potential for installation of Twin-Vue overseas is “every bit as exciting as in the U.S. In Europe squash is already very popular and racquetball is just now starting up. The clubs to be built overseas will be very much like the successful ‘open plan’ [see side bar with this story] full service clubs you have in America. We expect to install our first Twin-Vue court in Canada later this year and Twin-Vue squash courts are already on order for Germany and France. “I believe, though, that racquetball will become very popular in Europe within a few years and that Twin-Vue glass will be one of the reasons for the game’s success. Racquetball has to be sold to the European public. And there’s no better way to do this than to expose them to top quality tournament play on a full view court.”

Roland Hill, standing on the far right, is the designer from England’s Campbell, Reith & Partners who created the concept for the portable glass court to be made with Twin-Vue glass. Twin-Vue Vice Presidents Jerry Haber, standing far left, and Ron Haber, standing fifth from the right, welcomed Hill and others who flew to Lyndhurst, NJ from Europe for the unveiling of the world’s first installation of three Twin-Vue court walls. Left to right, standing: J. Haber, Brian Winterburn, Phillip Wise, David Pearson, David Lock, Bob Morris, Jeff Poole, R. Haber, Ian Wright, Jean Reynolds, Lou Zandvilet and Hill. Kneeling, left to right, John Easter and Rob Pope. Pearson who lives in England, is president of Twin-Vue. The others are associated with squash organizations.

Playing in the Open

Chances are you’ll play on Twin-Vue even if you never step into the portable court for which the new opaque-transparent glass was invented.

That’s because racquetball facilities are turning to the “open plan” club, with courts of Twin-Vue glass on the same level as the lounge and seating areas.

“The open club design makes the club an attractive gathering place,” says Ron Haber, president of W & W International, which produces Twin-Vue in the United States. “The concept replaces long, low halls between courts and the necessity of hanging over a railing to watch a game.”

“People like to relax around the courts—in a lounge or a restaurant—while they watch their friends play. In some cases clear glass is workable for the open plan. In other cases, especially where side walls are open to lounge areas, Twin-Vue is the answer.”

The open plan of San Francisco’s Bay Club gives members two different levels of racquetball viewing through back walls of glass.
Glass Roots

Here are some landmark years in the development of glass for racquetball:

1943
Handball Champ Bob Kendler leases the former Medinah Club on the first 14 floors of what is now the Sheraton Hotel on Chicago's Michigan Avenue. He changes the name of the four handball-one squash court operation to the Town Club. "When I took over," the 77-year-old NRC/USRA president recalls, "the fellows would go on the handball court with a jock strap, a pint of gin and a cigar... I played handball there after work and brought my wife, Evie, with me. She'd have to lean over the railing to watch me play. I wanted to make it comfortable for her to watch. Her comfort made me look for a way to install enough glass so she could sit and watch the game... and that glass, bringing the game out in the open, changed the whole complexion of handball—and eventually influenced the course of racquetball."

Kendler contacts a glass company about making a sheet of glass tough enough to withstand the hammering from a handball. At the same time he asks Clare Hinckley, architect and engineer with Kendler's Skokie (IL) building company, to invent a way to secure the glass while accounting for its expansion and contraction. Kendler and Hinckley come up with a screwclip system and the manufacturer creates a plate glass skin that a hard hit handball can't crack.

1958
A group of handball players at the Aurora (IL) YMCA raise funds for a new addition that includes an exhibition court with two side walls and a back wall ceiling to floor of tempered glass, made up of five by 10 foot panels—one on the other—that fit into a framework at the top and bottom. Art Linkletter, one of the day's big name TV personalities and a handball playing friend of Kendler's, arranges for a live coast to coast hour and a half broadcast of the United States Handball Association Nationals. Joe Ardito, who later took his present post of USRA national commissioner, is among the players televised through one stationary camera placed in the center of the balcony and focused on the court.

Charlie Brumfield, left, and Dave Bledsoe in Aurora, IL.

1969
The first racquetball Nationals, played at the Jewish Community Center in St. Louis, give many competitors their first experience with glass. Recalling that encounter Charlie Brumfield says "It was disquieting to lose the balls against the glass."

1975
National Racquetball Photographer Arthur Shay takes his first racquetball pictures through glass at the NRC pro stop at the Court Club of Burlington, VT. (Another first for that December event: A 17-year-old named Marty Hogan wins his first professional tournament.) Shay acknowledges that he catches the action better through the side wall of glass than he does shooting through the safety window in the court door, but he remembers "The standard green-blue half inch glass of that wall—coupled with arc lights—added an unwanted color to the pictures."

1977
David Pearson, partner in a family glass business in England, flies to Australia to work with an architect on a product that is equally advantageous to players and spectators, with a surface opaque from the inside of the court and clear to the gallery surrounding the court. The resulting product is a patented ceramic mixture that looks like printed white dots fused into the surface of tempered glass.

1978
The first panels of dotted glass, now known as Twin-Vue, pass the playing-viewing test in a partial court erected in a British TV studio. After playing on the sample court the USRA's Dan Bertolucci, now NRC director, observes that he can follow the ball the way he can against a solid white wall.

1979
Alex Guerry pioneers Twin-Vue with one wall in a court at the Sports Barn in Chattanooga, TN. Club members praise the playability of the court and Guerry makes suggestions for further improvements. W & W decides to make Twin-Vue whiter from the inside by changing the dot formula.

1980
King's Court in Lyndhurst, NJ becomes the first facility with a court that has three walls opaque to players and transparent to the audience. (Other clubs install one and two courts with similar walls.) For reactions of players and others at hand at the December unveiling in Lyndhurst, see the story on these pages.
It seems more and more people who sell racquetball shoes are starting to get the idea: What you play in should be tougher than what you play on. Foot-Joy. A very tough racquetball shoe. Available at listed and other quality pro shops, sporting goods and athletic footwear specialty stores.
(Continued from previous page) More easy ways to find the toughest shoe in racquetball.

Energy to Win
How to Avoid Fatigue on the Court
by Frances Sheridan Goulart

In 500 B.C. the seer, Suttapitaka, said “...better to live one day of steadfast energy than a hundred years idle, without it...”

Centuries later Sir Thomas Powell Buxton, the English social reformer, remarked “The longer I live the more deeply I am convinced that that which makes the difference between one man and another—between the weak and the powerful, the great and the insignificant—is Energy.”

Certainly energy is what makes the difference between great and insignificant racquetball players. And no wonder.

“Racquetball’s chief benefit is a vigorous workout in a short period of time,” says L.G. Van Bellingham, owner of New York’s Manhattan Squash and Racquetball Club. “It is more physically demanding than tennis...you take more swings, run more steps and circulate more oxygen through your bloodstream in half an hour than in an hour and a half of tennis singles.”

As an athlete on the muscle your energy needs differ from your bench warming brethren.

Explains Covert Bailey in Fit Or Fat “Muscle (which accounts for 30 percent to 50 percent of the athletic body) is unique in its ability to produce sudden bursts of energy. All cells require energy, but cells other than muscle undergo relatively small changes in their energy requirement. For example brain cells use only two times as many calories during intense thinking as during sleep. Muscle cells, on the other hand, going from a resting condition to a sudden burst of energy, may increase their energy demand by fiftyfold in a split second...Muscles contain the only tissue with enzymes that are specialized for sudden increases in calorie burning.”

But what if you’re suffering an energy eclipse; what if your muscle hustle isn’t what it used to be?* Here are a few of the reasons you may feel like you’re running on empty.

Eighty percent of tired people we treat,” say How to Triple Your Energy authors, Doctors Leonard Haimes and Richard Tyson “are suffering from a combination of bad habits, inferior menus and poor mental attitudes.”

Indeed negative emotions and a non-positive attitude on court can literally drain you of energy. But even bigger bad news bad habits are:

1. **Over-Training.** You may be playing without proper recovery periods.

   Physical fatigue involves a slow but progressive decrease in oxygen molecules delivered by the blood supply’s hemoglobin to the muscles. The oxygen and the glucose in the blood combine into glycogen that provides energy to activate the muscles.

   A good oxygen supply means good muscle operation (barring other defects). Furthermore the residue of the oxidation of glucose—the waste product called lactic acid—must leave the body quickly.

*Persistent fatigue can be caused by hormonal imbalances, chronic infections, allergies and a variety of serious illness as well. See your physician to rule these out.

---

NATIONAL RACQUETBALL 21
"When an athlete accumulates an ‘oxygen debt,’ (measured by determining the amount of lactic acid ... in the muscles ... ) recovery may take an hour or more, depending on the degree of conditioning, according to a 1972 article in the Journal of the American Medical Association." "You will feel fatigued after a hard match if you don’t allow enough time for your body to recover its reserves," the article warns.

You might consider the energizing end results of what Clarence Agress calls "dash training," in his book, Energetics."Running at full speed uphill for 30 to 60 seconds, repeated five to 10 times a day and allowing low-level exercise between dashes, will improve performance. In independent studies subjects made to perform interrupted and continuous exercises exhibited greatly improved performances ... Dash Training increases the capacity for hard exercise with less fatigue say experts, training the large muscles ... in the arms and legs without overloading the lungs or the heart."

On the other hand your fatigue may be caused by

2. Under-Training. If you haven’t been extending the limits of your endurance, you may think you haven’t got as much energy as the next person. You may, in fact, be under-trained.

Actually energy begets energy.
As Exercise Expert Herbert DeVries observes in his book, Vigor Regained, "When muscle glycogen is depleted by vigorous exercise, the level stored increases to approximately double its previous quantity within about three days (when accompanied by a balanced diet, including plenty of carbohydrates). DeVries says the right amount of exercise increases fuel stored in muscles and makes the oxygen supply readily available to the active muscles. This availability of oxygen determines the upper limits of intensity of exercise we can sustain.

Other experts agree that much fatigue is due to improper habits of exercise.
"Under-trained athletes often show up at racquetball courts," says Hal Higdon in Fitness over Forty, "determined to make full use of court time in a sport that will put more sudden stress on the body than running a mile or a marathon."

The best way to remedy this, says Higdon, is to train yourself into better racquetball readiness by running, jogging, cycling or swimming—so called low level activities that build strength and endurance.
According to H.G. Knuttgen M.D. and associates at the Department of Physiology at Karolinska Hospital, Stockholm, and the University Hospital, Uppsala (Sweden), if you run by using short-distance fast sprints or long distance slow runs, your ability to bum oxygen will improve because your muscles, making up 40 percent of your body weight, develop a better capacity to use oxygen and gain greater strength.

Other studies also conclude such extra training pays energy dividends. "Highly trained athletes need less energy for a given performance than do less well trained athletes, according to a 1970 article in condition. This is a consequence of improved efficiency in the working muscle, better metabolic economy, greater heart-lung efficiency, better coordination and more economic technique."

Your body needs time to recover between playing periods.

Riding a bike—mobile or stationary—is a low level activity that builds endurance for the greater energy demands of racquetball.
3. Food, Drink and Vitamins. Another reason you can't get that second wind is that you may be out of gas or out of Thirst Quencher, or you may need further athletic support in the form of nutritional supplements.

Dehydration during tournament play, for instance, often goes unnoticed and unchecked. Yet when more than two to three percent of the body's water is lost, performance declines.

There is tremendous individual variation in fluid loss under the same basal conditions, even for people of the same general body build, say experts. Heat fatigue can happen to anyone because it is related not to physical conditioning, but to acclimatization to hot humid weather. High humidity decreases the effectiveness of sweating and increases heat stroke possibilities.

Once the temperature goes above 80 degrees, sweating is the only mechanism by which the body can cool itself. Loss of water through sweating is greater than the salt loss and is always accompanied by fatigue.

Taking a drink during a time out helps fight fatigue.
You can protect yourself by becoming a faithful water drinker, or replacing liquid losses with foods that are specially juicy such as tomatoes, oranges, and watermelon and tangerines.

Likewise a reducing diet low in calories or providing unbalanced amounts of nutrients can be an energy defuser. Covert Bailey cautions that on a high protein, low calorie diet "It is possible to lose as much as one pound of muscle for every pound of fat."

Just as exercise affects the level of the glycogen stores, so can diet alter the amount of glycogen in the muscle.

One way is to up the carbohydrate content of your diet (fresh fruits, vegetables and whole grains) to 75 percent prior to and during any competition heavy period. "This means relatively light meals that are high in carbohydrates . . . avoiding foods like steak which are high in fats and protein and hard to digest," says Tom Fahey, Ph.D., who heads the physiology lab at DeAnzo College in Cupertino, CA. (Fahey also recommends that pregame meals should be eaten four to five hours prior to competition.)

Vitamins and minerals? You need them at all times, but doctors and exercise physiologists say you can combat unusual sports fatigue by taking extra mounts of some nutrients temporarily.

"Magnesium and potassium are the two most important minerals in combating fatigue," says Howard Lutz, M.D., nutritionist and director of the Institute of Preventive Medicine, Houston, TX. "If you have a deficiency in these two minerals, you'll experience tremendous fatigue. You may wake up in the morning and feel so tired that you want to go back to bed. At the end of the day you feel washed up. Your muscles feel soft, flabby and drained of energy. Sometimes you experience muscle pain and your reactions are poor," Lutz adds. Good sources of these minerals include seafood, sea vegetables, dark green leafy vegetables and raw nuts.

Edmund Flink, M.D., of West Virginia University Medical Center, suggests that supplements of magnesium and potassium to the diet result in new energy within five to 10 days.

4. Stretch:

According to Rene Cailliet, M.D. of the Department of Rehabilitation Medicine of University of Southern California, "If your muscles are tight, they are restricted and burn up energy causing pain. By stretching muscles you increase your energy potential and neutralize the symptoms caused by tension. You can double your energy and cut your pre-and post-game tension in half with these stretching exercises."

Lower back stretch - Lie on your back with your knees pulled tightly to your chest. Wrap your arms around your legs so you're in a tight ball. Then push your knees against your arms for five seconds. Release and relax. Repeat eight to 10 times.

Spine limbering - Sitting with both legs bent, knees facing outward and feet together, gently try to bring your nose to your feet. Hold for five to seven seconds and then come to an upright sitting position for three to five seconds. Repeat eight to 10 times.

Lateral muscle stretch - In a standing position lean to one side, reaching down with your right arm to the lower part of your right leg. Your left arm should arch over your head toward the right side. Hold for five seconds. Return to a standing position. Repeat 10 times. Then do the same exercise on your left side 10 times.

Head twisters - Stand with your arms at your side and touch your left ear with your left shoulder and hold for three seconds. Repeat 10 times on each side.

Neck twist - Stand with your arms at your side and bring your chin to your right shoulder and hold for three seconds. Repeat eight to 10 times on each side.

5. Consider Special "Energizers"

• Brewers yeast and nutritional yeast ward off energy-robbing low blood sugar levels.

• Kelp, a tasty high mineral powder from seaweed, is also a natural energizer, and so are wheat germ, wheat germ oil and calcium pangamate (B15).

1. Forget about last minute munching.

The energy athletes expend in performing in any competition comes from food consumed anywhere from several days to two weeks before the event.

2. Time your meals to maximize energy.

Catherine Cowell, director of the Bureau of Nutrition of the New York City health department, says a lag of two to three hours between the meal and the competition permits proper digestion.

3. Be aware that certain time periods in the day are "buzz periods," bad times for giving a game all you've got.

Glycogen levels, for instance, begin to decline in the late afternoon. And by early morning (3 a.m. to 6 a.m.) your liver has used up much of its glycogen. Steroid hormone levels are on the decline around 5 to 7 p.m. and this decline in hormones is experienced as fatigue.

• Bee pollen might be worth a try. "Taken daily and specifically between exercises of high intensity, pollen . . . is a boon to athletes during the days, weeks and years of grueling work preparatory to major competition," says Former Russian Olympic Coach Remi Korchemny. He recently concluded a two year research program on the effects of bee pollen on athletic performance at Brooklyn's Pratt Institute, where he's now coach.

• Another bee believer is Irving Glick, M.D., who was team physician to the New York Apples, the World Team tennis champions.

Glick actually put the New York Apples on English bee pollen during their championship years, with Billie Jean King, Virginia Wade and Sandy Mayer getting good results from this natural food.

• Energy ades are potassium-depletion solutions, also rich in magnesium and vitamins A, B and C, and recommended for mid-game or mid-tournament energy crises.

Frances Gouart is author of Eating to Win: Food Psyching for the Athlete, a Stein and Day book now in its second printing, available in hardcover or paperback.
Hundreds of court installations, without a failure, mean proven performance. Here's why!

The material is premium grade 62-P hi-density, hi-pressure laminated court panel system.

Superior quality and long life.

Complete court package designed and engineered to fit your needs and budget.

Dimensionally stable, structurally sound, non-sweating surface.

Resists chipping, cracking, scratching and marring from racquet contact.

Playability is true and consistent, with uniform ball action and sound.

Minimal maintenance, never needs paint, cleans with soap and water.

Exacting specifications and full inspection procedures prior to shipment.

Faster installations, no downtime revenue loss.

Highly trained experts make all installations, backed by double guarantee from World Courts, the court systems specialists.

Who's Playing Racquetball

Harvey Ruvin:
Policy Making for Millions

In the little over two years since Dade County Commissioner Harvey Ruvin discovered racquetball, he has become one of its most vocal supporters in south Florida.

"Playing racquetball is not only fun, but it's a challenge as well. It offers enormous stress relief and super physical conditioning," Harvey says. "I try to play three to four times a week, if I can. I know that it helps me function better in all the other areas of my life."

Ruvin, 42, conducts an active law practice in Miami and serves on the Dade County Board of County Commissioners. As one of nine elected members of the Board he shares the legislative and policy making responsibilities of one of the most progressive local governments in the nation. Dade County covers 2,300 square miles and has a population of 1.6 million people with the full range of both urban and rural problems. Ruvin calls Dade County "the international center of the future"—a mixture of tourists from around the world, retirees, businesspeople and new American citizens.

Aided by some 23,000 employees the Board's jurisdiction involves the provision of police, fire, sanitation, parks, sewage, zoning, water pollution control and public transportation services, as well as the operation of a major airport, seaport and medical complex.

Ruvin, who was the mayor of North Bay Village before coming to the County Commission, recommends the rewards of serving at the local level of government. "It's a great opportunity. At no other level is the challenge as intense and the feedback as quick and direct."

In addition to his local duties Ruvin is national chairman of the National Association of Counties (NACo) Environment and Energy Steering Committee. Ruvin, who holds an engineering as well as a law degree, is considered an expert in the role local government plays in the energy picture.

The NACo appointment and others with a Presidential Panel on Science and Technology and with the Local Government Advisory Committee to the Secretary of Energy have required some travel.

"I always take my gear, just in case there's some free time to explore court clubs wherever I may be. I played in the Pentagon with Charles Duncan, who was secretary of energy at the time, after I'd read in National Racquetball that he was a player."

Ruvin usually plays at the Sporrooms in Coral Gables, FL, where teacher/pro Bob Bos says his student is already a B player "who is always willing to learn and work at improving." The commissioner says "it's nice to keep getting better—it was satisfying to win a tournament at the club in January—but most of all I just want to stay healthy and keep on having fun."
Ask the Champ

by Marty Hogan

Three Time and Current Champion Marty Hogan, a Leach player who won the $30,000 first prize in the June Nationals in Las Vegas, answers questions about improving your game in this exclusive National Racquetball series. Send your questions to Marty Hogan, c/o Ask the Champ, Managing Editor, National Racquetball, 4101 Dempster, Skokie, IL 60076.

Hogan Explains His Pinch

Question: I would appreciate it if you would share with your readers your uncanny ability to hit the side wall-floor corner shots. I would be interested in knowing how hard the shot should be hit and what the best angles are for hitting a corner shot from up front, mid court and back court. Also at what heights should the ball hit off the front wall for a corner that "nicks" up front, mid court and deep along the side wall.

Mark S. Wilson
Soquel, CA

Hogan: The ability to hit the pinch shot is what separates the average from the above average player. Without the effects of this shot in your arsenal you opponent possesses the advantage of being able to lag in deep court and cover most of your passing shots easily.

In order to hit this side wall corner shot you should first hit the ball much deeper in your stance. Never try to force a ball out in front of you to the side. This will only result in a weak return. After the ball has positioned itself deep in comparison to your stance, then position your body slightly toward the side wall that you desire the pinch to go. Then just go ahead and take your normal swing.

The pinch should not be hit harder than any other ball in the rally. Do not try to overhit the pinch. This will just cause the ball to pop up, making it easier for your opponent to retrieve.

As far as your positioning on the court is concerned the closer you are to the front wall, the closer you should also be to the given side wall that you are hitting the pinch to. Therefore if you're in the front court, you should be near the side wall to execute the shot. When it's center court, the angles are near perfect for both the forehand and backhand pinches. Then—when you are in deep court, you should position yourself away from the side wall when hitting a shot to that side.

Do not be too fine with this shot, trying to overkill it. The pinch is most effectively hit between six inches and a foot high, no matter where you want it to "nick".

Question: Do you feel racquets will continue to be lighter in the future?

Merrilee Floyd
San Bernadino, CA

Hogan: It is a delicate subject—talking about how light racquets can get. I believe there is the mechanical know-how to produce playable racquets much lighter than those on the market today. However when you arrive at the problem of the racquet being overly light and causing a player to overswing, thus producing stress on the elbow and shoulder joints.

I believe the very lightest a racquet should weigh is 230 grams. Anything lighter than that could cause severe arm damage. With the way the game is developing—that being power first and control second—you would be putting yourself at a great disadvantage by using a racquet weighing more than 295-300 grams. I believe the mean weight of the racquets on the market today is in the vicinity of 260 grams.

However in the near future because of the projected slowing down of the ball on the pro tour, which makes for longer rallies, and a need for more control, I believe you will see a trend toward people starting to use slightly heavier racquets than they are today.

Formula Corrections

Marty,

I quote you in the December 1980 issue of National Racquetball: "For those of you who regard me as all brawn and no brains—here's an equation I worked up:

reaction time of play = velocity of ball x distance ball has traveled." If this is an indication of your mathematical ability, stick to racquetball. The equation you have cited does not measure reaction time. It should read: reaction time = distance ball has traveled/velocity of ball. For example, velocity of ball = 135 mph. = 198 feet/second. Distance traveled = 60 feet. Reaction time = 60 feet/198 feet/second = .303 seconds.

Cecil Smith
Chapel Hill, NC

Dear Marty:

I am greatly impressed by your racquetball talents and your court knowledge. However your December, 1980 "Ask the Champ" equation of

reaction time of play = velocity of ball x distance traveled

is wrong. The correct formulation is

reaction time = distance velocity.

A check of the units—i.e. time, distance/time and distance—will show your error. Your conclusion is correct, but the justification was like a dink from the deep backhand corner, i.e. wrong! Keep up the good work and play and stay healthy. You are an inspiration to all racquetballers.

David Marshall, Ph.D.
Huntsville, AL
Inside the Master’s Mind by Charlie Brumfield

Practice Sets You Free to Win

Most racquetball players believe the old slogan “practice makes perfect.” But few know exactly how, what, where, when and with whom they should practice in order to perfect their game. Practicing involves a lot more than just hitting the ball around by yourself while you’re waiting for your partner to suit up.

In all aspects of life, including racquetball, I feel it is essential to work toward a goal. This is what makes the game (of life or racquetball) fun, challenging and, in the end, rewarding. If you don’t practice you will never reach your full potential. Repetition, coupled with success, breeds confidence. If you can achieve success in practice, you’ll have the confidence which allows you to achieve success in a game situation . . . and that’s what practice is all about.

Choose Your Style

But in order to work toward a goal, you have to define what that goal is. This can be done with the aid of your local teaching pro. He or she should be able to work with you on the basic strokes and help you decide what style of play fits your personality.

Another excellent way to decide what kind of player you want to become is by watching the pros or the top level amateurs in your area. If you have a fiery, temperamental personality, you are probably more comfortable playing an aggressive, banging style of play. At the other extreme is the laid back, analytical person who spends more time philosophizing about the game, but rarely puts his or her theories into practice. If the analytical person ever does step on the court, you can bet she or he will play defensive, percentage ratio style of play.

The majority of players fit somewhere in between the extreme doer and the extreme thinker. The ideal would be a balance between the two. But first we need to examine the extremes to understand which elements of each you want to incorporate into your own style.

We might call this the art/science dichotomy as it is labeled in the book, Zen and the Art of Motorcycle Maintenance. In racquetball these polar extremes could be represented by pros Marty Hogan, representing the artistic approach, and Steve Mondry, representing the analytical or scientific approach.

When asked “what do you think about when you practice?”, Hogan responds, “The only thing I think about on the court when I’m practicing is when is it going to be done.” Now he’s being a little “solicious,” but what it amounts to is he has to play games when he’s out on the court by himself or else it becomes boring. Marty is extremely imaginative when he practices because if he has to hit the same shot more than three times in a row, it isn’t a challenge for him. But it’s this creativity that puts Marty, and other athletes like him, at the top of his profession. They say that greatness is that which does not remind you of anything else. And that’s certainly true of Marty and some of the younger players on the tour who have their own distinct style.

Another name for the artistic approach is the “feel method.” You ask Marty where his elbow is at a certain point in the swing and he gets a blank stare on his face. That doesn’t mean that he isn’t aware of where it is. He can feel that it’s right, rather than analyzing it. Marty can show you physically how he hits the ball, but he can’t verbally describe the arc of the swing in degrees or measure.

So while a player like Mondry might be trying to think of 44 different things while he hits the ball in practice, Hogan says he thinks of absolutely nothing. “I practice certain shots,” explains Marty, “but nothing technically. It’s difficult enough to hit the ball, let alone worry about whether my wrist is right, my elbow is bent at the right angle, my grip is right or my toes are pointing in the right direction. You don’t need all those distractions.”

At the exact opposite end of the spectrum is Steve Mondry, the analytical or account­ant type of player. He likes to deal in numbers, and big ones at that. I believe Mondry is too analytical, and that his
“Practicing for anything more than an hour causes most people to lose the advantage of the practice... Practice as long as you can keep intensity.”

ranking dropped by practicing 1,000 balls every day. The danger in this approach is that you become too concerned about quantity of shots hit, rather than quality. Also the mind ceases to function after a certain period of time when you're practicing and after that point your practice sessions become counter-productive and you just burn yourself out. You run the risk of suffering from what we call “Paralysis by Analysis.”

Of course these players represent two extremes. There are advantages and disadvantages to each approach, but fortunately most players fall somewhere in between the two dichotomies. So ideally you should pick the assets of each approach and strive toward your goal using the combination of methods that feels most comfortable to you.

Chart Your Goals

The analytical player goes one step beyond and uses paper and pencil to chart improvement and projected goals. This is something that would be wise for all players to do, even if their tendency is more toward the “feel” method. I believe that Marty falls up his percentage of success on each shot, but he does it mentally, perhaps even unconsciously.

When I go out on the court, I identify six major areas of the court, which we have identified in the sample chart composed by Ernie Charfauros, a top level amateur from San Diego. Ernie leans more toward the analytical approach, so he may actually practice 18 different options from each major area on the court, plus numerous minor areas also. But again, for the sake of simplicity, and so those of you who do not revolve your lives around racquetball can apply these techniques, I've requested that Ernie choose only three shots that he would work on from each particular area.

By practicing three shots from each area you have a complete repertoire of alternative coverage patterns. Once you practice your 18 different shots (three times the six areas you hit from) to the point that they become repetitive and natural, you will be able to keep your opponent guessing during a match, without demanding any improvising on your part during the rally. By limiting yourself you allow yourself to become proficient at a number of shots that become automatic during the match.

Ernie’s Practice Chart

(Use this as a sample to help you formulate your own, but keep in mind that Ernie is an advanced player, so you might want to simplify the shots)

Ernie’s Progress Report

According to this chart on Dec. 1 Ernie hit 85 successful straight kills to Zone 1 out of 100 tries.

When I used to practice ceiling balls, I'd hit 1,000 ceiling balls a day. I'd keep hitting them until I hit 10 perfect wallpaper ceiling balls in a row. Gary Player is one of the greatest sand trap golfers of our time. What he did was throw balls into the sand trap and keep hitting them until he'd holed five balls. Now that's when you know you've hit some successfully. I feel that you should come up with a number to practice as a reference point, but you should only continue until you've achieved your goal. It's not how many shots you've hit, but how many successful shots you've hit that counts.

Your chart is always going to be changing as you advance. After you've mastered the shots you've selected in practice, then you'll only need to practice them enough to tune them up. So after ceiling balls become second nature, you might try hitting five good ceiling balls and then—let's say—an overhead drive cross court.

But most of you reading this article are not going to put in that much effort because racquetball is not your profession. It's your recreation, so you want to keep it fun and keep it in the right perspective in your life. You don't have all day to think about creativity on the racquetball court. So instead if you learn just three effective weapons from each of the six zones on the court, you're going to find that you're much more successful than if you try to hit something new every time.

As an analytical player you'll also chart your success percentages for each shot practiced. This can be invaluable as an
ego boost to see how far you've come. It's also handy as a reference before tournament play. If you think you have the luxury to wait for a shot that you know you can make 90 percent of the time, then do so. But if you find that your opponent is too good to give you that luxury, than you might have to use your backup shots even though your percentages may be only 70 to 75 percent.

In my heyday I hardly ever attempted a killshot that I could not execute 80 percent of the time. The rest of the stuff I hit consisted of controlled passes and ceiling balls, patiently waiting for an opportunity to hit the ball from a zone where I had been more successful in practice.

Keep It Intense

Next you might ask how long should you practice? That all depends on your personality and concentration. Practicing for anything more than an hour causes most people to lose the advantage of the practice. But you should try to practice for as long as you can keep intensity. Racquetball players, even professionals, do not practice as much as they should. But as the money continues to grow in our sport and even local competition becomes keener, we will begin to see more players putting in the extra time by themselves.

This again brings up the question of quantity vs. quality. Almost every sport nowadays is going to quality rather than quantity. This can even be evidenced in swimming. Coaches used to make their swimmers do 500 laps a day and just plod through the water. Now they're more interested in intensity, concentration and quality.

When I was younger I could keep my intensity longer, but over the years my concentration and desire have gotten worse. I don't know if it's an aging process or hormonal or getting burned out or what. But after talking to many other older athletes from other sports, I've found out what goes first is not the legs, but rather the intensity and desire.

So my practice sessions have been cut back drastically. I only practice three times a week for an hour maybe, when before I was hitting 1,000 to 2,000 shots per day, every day, and playing more in a practice fashion. Now I hit only 200 or 300, but I still chart the percentage that I hit well, so I can see trends. I also use my chart book to record how well each shot held up in a game situation as compared to the week before. So I can see improvement, and that's what's fun in the sport.
But just as important is the time I spend practicing off the court. If you follow any pro athlete around downtown, it won't be long before a basketball player will shoot an imaginary basket, a wrestler will go for any imaginary take, a quarterback will throw an imaginary touchdown pass. If you follow me around for a while, you'll probably see me shoot an imaginary backhand pop shot. What that is is playing a mental game, taking shots in your mind: Visualization.

**Visualize**

Visualization is important in all aspects of our lives. It goes along with positive thinking. If you can imagine yourself thin or rich or outgoing or quick or powerful or anything else, it's much more likely that you will achieve your goal.

A study was done a few years ago involving two equally matched basketball teams. One team went through the usual conditioning and practice on the court and played through real scrimmages among themselves. The other team also worked off court conditioning, but they never picked up a basketball. Instead they went through all the particular plays and techniques mentally. They sat down with their coach and thought through where they were going to move on the court and how they were going to defend and score. When the teams played each other it was evident that the mental method was every bit as effective for preparing the team as the physical method. I believe in a combination of both.

I've heard a lot of players remark on how much better they're playing after a long break caused by traveling, injury, catching up at school or at work. They always seem amazed that without spending any time on the court in months their backhand is much stronger or something similar. But this doesn't surprise me at all, because what they probably have been doing in that time spent away from the court is thinking about their game a lot more.

Another example of this is when someone asks you a question that you know you know the answer to, perhaps "Who starred in 'An Unmarried Woman'?" You know you know it, but it drives you crazy because her name has slipped your mind temporarily. Then—hours later—when you're involved in something totally different—all of a sudden you yell out "Jill Clayburgh!" and everyone looks at you a little strangely because your revelation is so out of context. But what had happened was your mind was working on the problem subconsciously and it does the same thing for your problems on the racquetball court.

So let's assume that you've watched enough players to decide how analytical and/or artistic you are. In fact it's a good idea to have a particular player in mind as a model. Generally women and girls should choose a woman as a model and men and boys should pattern their game after one of the men on tour. All of the professional racquetball players on tour have excellent styles and are worthy of imitation, but you must decide, perhaps with the help of your local instructor, which person is best for you. The reason every pro hits the ball a little bit differently is a reflection of their varying builds, personalities and types of stroking background. So keep these things in mind while making your selection.

Once you know who you want to use as a style pattern, watch her or him enough—via live play, clinic demonstration, video tape or televised tournaments—until you have a visual image of the stroke. Another thing that will help is a series of picture analyses—"picture perfect racquetball"—which I'm planning with National Racquetball Photographer Art Shay.) You might want to learn Steve Serot's backhand, Marci Greer's serve and Davey Bledsoe's forehand. You don't need to clone yourself to everything about a certain player. You only want to let the pros give you the fundamentals and then add your own idiosyncrasies to make it comfortable for yourself. Even the most analytical player needs to be somewhat creative. The important thing is that you have a mental picture of the stroke you want to learn.

Once you can visualize your stroke the next thing is not to go down to the court and play a game, hoping to incorporate your image immediately. First you need to get yourself in front of a mirror so that you can project your mental image onto the image you see reflected in the mirror. Work it through patiently in front of the mirror until you can see yourself, more or less corresponding to that picture image you have of the player you want to emulate.

**Swing before the Mirror**

Next apply the Marty Hogan "feel method." Once you can swing your racquet in front of the mirror, memorize that feeling and try it with your eyes closed. Spend enough time in front of the mirror or off the court, having your body go through the stroke, until your muscle memory takes over. Even if the new stroke feels funny or different at first, it will begin to feel normal to you after visualizing and practicing in front of the mirror. Pretty soon you won't be able to remember how you once hit the ball.

In a way this is a form of self hypnosis. But you don't need to go to Dr. Michael Dean or purchase self-hypnosis tapes. All you need to do is work it through in your mind until that image is ingrained in your brain. Then work with your body to fit that image. Eventually it becomes as natural as putting one foot in front of the other when you walk. Since you don't consciously need to tell yourself to do that, you leave your mind free to think of something else—like chewing gum. On the racquetball court having your stroke be automatic frees your mind to analyze the particular situation you're in at that moment. And practicing frees you from worrying whether the shot is going to go in or not. You've already seen yourself anticipating a cross court shot, stepping over to cut off whether the shot is going to go in or not. You've already seen yourself anticipating a cross court shot, stepping over to cut off the angle, and punching it down the line 10 times while you were driving home from the courts. So the next day when that situation comes up in your game, you feel like you've done it a thousand times before.

Now your homework assignment for this month is to think about what you read in this article. You might be surprised how powerful the subconscious mind is at incorporating your thoughts into action. In, Part 3, my Practice articles I will take you down on the court and show you how to practice—by yourself, with a partner and against an opponent.
That Difficult Backhand Down-the-Line
by Mike Yellen

One of the most difficult shots in racquetball is the backhand down-the-line. You have to worry about skipping the ball or putting it too high on the front wall, and your target isn't that wide either. In order for the ball to come off the front wall hugging the side wall, it has to be hit more or less straight down the side wall in the first place.

That's no easy task on the forehand side and, for most of us, a wallpaper shot is even harder to achieve off the backhand.

The rewards are great, though, and well worth the trouble it takes to master the shot.

Assuming that we are discussing the typical situation in which both you and your opponent are right handed, he will have far more trouble returning your backhand down the line than you did executing it. He will have to give up the coveted center court position in order to play your shot and, because of the difficulty in scooping a ball off the side wall, will be forced into a weak return.

Your down-the-line shot can be a kill, pass or ceiling ball, depending on your opponent's position and the time you have to get your shot off. Your body mechanics will not differ appreciably among any of these, again making it difficult for your opponent to anticipate your choice.

You line up the same way for each of these shots with your feet pointing directly into the side wall. I'm right handed, so I face the left side wall and make contact with the ball off my front foot as I step toward the side wall.

Not Too Far Forward

The most common errors players make on backhand shots is that they line up facing too far forward or step too far forward when shooting.

We are all used to stepping in the direction of our shots on the forehand side. But, with the forehand, you are shooting with an "open" body, while you must reach across your body to execute a backhand.

Just as you have to adjust your grip on the racquet when changing from forehand to backhand, you have to adjust your body angle in order to correct the lateral direction of the ball. Unless you get your left side behind you and out of the way, you will have a tendency to use all arm in order to get the ball forward instead of a sharp wrist snap where true power is generated.

(Just as an aside many advanced players are able to change the direction of the ball just by changing the angle of the racquet face when they don't have a chance to set up properly and are lined up too far forward.)
Figure 2. This photo illustrates the difficulty of defending yourself against a backhand down-the-line. I had been playing up anticipating one of Jerry Hilecher's kills and, instead, he put a picture-perfect pass right by me.

Also you'll find that you do step a couple of degrees toward the front wall when executing a good backhand, depending on how far from the side wall you begin your shot.

Since the overwhelming tendency is to step too far forward, though, it won't hurt to over-correct a little by consciously forcing yourself to step toward the side.

From there you simply contact the ball cleanly at the correct height. That would be up around your chest for a ceiling ball, from there down to your knees for a pass and knee level or below for a good kill.

Head Down

As with all shots you also must force yourself to keep your head down and your eyes on the ball while shooting, instead of looking in the direction you want the ball to go.

Go for the kill whenever possible. If you aren't low enough, you will still have a good down-the-line pass.

Be sure to contact the ball off your front foot. If you strike it behind the foot, the ball will go into the side wall, to the front wall and out into center court. That may be okay if your shot is low enough to die off the front wall. But if you leave it up, your opponent has a plum in most instances.

The farther you contact the ball out in front of your foot or the more you step toward the front wall, the greater chance of the ball going cross court instead of down-the-line. It might not be a bad idea to alternate your down-the-line shots with occasional cross courts when your opponent is playing close to the backhand side of the court anticipating a down-the-line. Don't give him a forehand kill, though; when he is positioned on the right hand side.

Whether you go for a down-the-line kill, pass or ceiling ball should depend on whether your opponent is playing up or back. You might want to pinch it in the corner if she is in the back court and hit a pass or ceiling ball if she is too far forward.

As always the rule is to hit it wherever your opponent isn't. Keep that in mind and your down-the-lines will be sure point winners.
Four Can Pickup Drill

by Steve Mondry

The drill I describe here is the Four Can Pickup. This drill is one of my favorites for increasing foot speed and developing proper movement on a racquetball court. The drill only involves about 10 minutes of time, which would allow you to do it after 45 to 50 minutes of racquetball, in the remaining time on a one hour court reservation.

I discovered Four Can Pickups when I met the tennis-playing Alex Guerry family at a racquetball tournament in Chattanooga two years ago. Alex is owner of Chattanooga’s Sports Barn. The older son, Zan, who was playing in the tennis circuit, was getting ready for the U.S. Open in about two weeks. One afternoon out on their court on the mountain we were discussing the importance of movement in both racquetball and tennis and various drills one could use in order to improve both speed and endurance. He mentioned that most top players feel that movement accounts for at least one-third of the reason of a player’s success. Indeed as one looks at some of the great tennis and racquetball players such as Bjorn Borg, John McEnroe and Marty Hogan, you have to be tremendously impressed with their ability to cover a court as compared with all other players.

Zan showed me several drills which he ran on the tennis court in order to improve his speed. My favorite of those drills was the Four Ball Pickup. I borrowed the basic idea of the tennis drill and adjusted it for racquetball, and the result is the series of drills which follows.

- Basic Four Can Pickup—Place four cans in a straight line at five foot intervals along the length of the court. From an imaginary starting line at the back of the court, sprint to the first can, pick it up, sprint back and place the can on the starting line. Do this to all four cans, and when all the cans are on the starting line, take them back in the reverse order from which you picked them up. Do this drill five times taking a 60 second rest period each time you’ve done the four can sequence. Try to do the sequence in 30 seconds. The drill helps you develop quick back and forward movements.

- Four Can Sideways—Place four cans in the right side doubles service box. Starting position is the left side doubles service box. Sprint to one of the cans, pick it up, spring back and place the can at the starting position. Do this to all four cans, and when all the cans are at the starting position, take them back in the reverse order from which you picked them up. The drill is completed when you cross the starting line, after replacing the last can. This drill should be done five times, taking a 30 second rest period between each sequence. Optimal time for the execution of the complete drill is 29 seconds. This drill is excellent for lateral mobility.

The keys to these drills are (1) Always run close to the ground so you can get under the ball, reach farther and stop quickly and change direction more rapidly; (2) Always give 100 percent to get in the habit of putting forth maximum effort and (3) Bend from the knee to build up your muscle endurance.

Running these drills will improve your overall balance when moving to the ball on the racquetball court as well as developing your quickness and mobility.
Ready for Combat
A Veteran Women's Coach Tells How to Take Racquetball Competition Seriously
by Pete Wright

Pete Wright coached his ex-wife, Veteran Champ Shannon Wright, and now he's helping Susie Dugan in the pro tournament competition. Wright teaches at the Bent Tree Country Club in Dallas, TX.

Among Pete Wright's proteges: Shannon Wright, left, and Susie Dugan.

Pro racquetball is obviously not for everyone. But the factors you should consider before becoming a pro can apply if you're a player bent on beating the best amateurs on state, regional and national levels.

Before accepting the challenge, find out what you are up against by attending an exhibition or big league tournament. Take along a notebook, pick out three or four of the better players and jot down your observations. Watch entire matches rather than isolated games and be sure to include remarks concerning concentration, stroking techniques, conditioning, favorite shots and strategy. Retain this information, adding to it whenever possible. The time will arrive when you will need to refer to these notes in devising a game plan.

Once you've gone on your field trips, you need an expert to analyze your game. That doesn't mean the local club champion or somebody's friend who claims to know the ins and outs of racquetball. Locate a respected instructor with national recognition and ask for references. The knowledgable people will be busy and expensive, but anyone else is not worth the time, unless your cousin happens to be Brumfield. Unfortunately there is a lack of qualified racquetball instruction, so if second thoughts exist get a second opinion. An experienced instructor should be able to accurately assess your game in one or two hour lessons. Ask for a written evaluation covering major areas such as stroke production, court coverage, visual awareness and general physical characteristics. Clinics and camps are fine, but right now you want the individual attention only private tutoring offers. Outside of sheer lack of talent, the major roadblock for players is incorrect technique. Take the time to learn the proper methods from the beginning.

Now let's review the pro's observations and see where we stand. Seek out comments concerning your visual awareness. If any weaknesses exist, make sure your lessons touch on those problems because all facets of your game depend on how you use your eyes.

Hours of Drill
Consider stroke production next and be prepared for countless hours of independent drilling. Since it is vital to isolate stroke development, I suggest you concentrate on the backhand first because learning to hit the ball from the opposite side of the body is a demanding task. If necessary spend an entire month working on the backhand or other difficult areas,
Susie Dugan prepares for the competition by conditioning, by having her game analyzed and by facing an opponent who's a better player.

and don't be hesitant about additional lessons. After 15 years of racquetball I still find it necessary and beneficial to drill on particular aspects of the stroke, and whenever possible I ask respected colleagues to evaluate my swing.

For now it's best to forego competitive play, so this is a good period to start a conditioning program. Turn again to an expert, preferably an athletic trainer associated with a school or sports medicine clinic. This person will be able to design a program specifically for racquetball and you. His or her worksheet should include stair runs, rope jumping and agility drills, as racquetball requires primarily fast twitch muscle response that simple jogging won't aid. Expect to be introduced to weight training to achieve the body strength top flight racquetball demands.

Combining conditioning with stroke drills requires an organized schedule emphasizing intense, limited duration training, instead of half-hearted marathon workouts. Try for two hour periods twice a day with conditioning exercises following the drills. Don't forget to include at least 10 minutes before and after for stretching. If you are in school or working, arrange to use the lunch break for your first session followed by a final evening workout. Although often faced with early hour tournament matches, many accomplished players refuse to train in the morning. Prevent this common pitfall by adjusting your schedule on the weekends and make sure to take one day off a week.

Surely there are those with the talent who desire a pro career but cannot devote the amount of time recommended. If this scenario describes your situation, do yourself a favor and adjust either the other priorities or your racquetball goals. The competition is simply too fierce for the three day a week player.

More Shots

Once you gain stroke confidence, you should expand your shot repertoire, relying on your pro for tips. You won't beat anyone with a limited arsenal, as savvy competitors will isolate and destroy the effectiveness of "pet shot" offenses. Minimum requirements include full range kills, passes both down the line and cross court and accurate ceiling and around-the-wall balls. Shannon Wright is the only woman player who wins by simply powering the ball towards the bottom board from anywhere on the court. She employs this strategy for two reasons. One she is considerably stronger than the other top women. Two she lacks speed and endurance and consequently must prevent long rallies. Most players should avoid this inconsistent approach and learn to play the percentage or control game first. Defense is still important in high pressure tournaments. I suggest you continue to refrain from competitive play, although you definitely want to engage other advanced players for serve, ceiling and pass drills. As your proficiency increases, allocate additional time to serve practice with variety being the key. Seasoned pros frequently hit several hundred serves per day. Enhance consistency by using tape to mark your position in the service zone along with the necessary rebound point on the front wall.

Schedule pick up games once your shot selection patterns are developed. A play-a-day, drill-a-day format seems to be the most productive arrangement with one day off per week. Choose your playing partners with care—especially if your goal is the professional circuit. Dismiss those individuals with insufficient knowledge of the rules or anyone not expressing a sincere desire to excel. If you're a woman, try to secure games with men's A and high B players. The average A male is comparable to a ranked female pro, so this will afford you an excellent opportunity to measure your progress. Encourage 100 per cent performance from these players as you don't want a padded score courtesy of half speed rallies. Even though the score may be occasionally lopsided, always provide maximum effort; otherwise you might lose a workout partner. For our practice games I spot Susie Dugan a specific number of points to maintain game intensity.
Four Point Scoring System to Improve Your Game

by Tom Dougherty

Dougherty, who is a teaching pro, worked out these ideas with Jim Winterton, teaching pro and manager of All Sports Fitness Center in Poughkeepsie, NY.

What Vince Lombardi really meant was “Winning isn’t everything, but wanting to win is.” Now I’d like to substitute the desire to win with a desire to learn, which brings about the improvement that leads to winning.

Let me explain what this means to you if you’re a beginning racquetball player. By eliminating the standard idea of what winning is—the first person to score 21 points—and by substituting this system of scoring, you become more open to learning and improving.

This is an honor system. After each game you analyze performance and answer each of the four questions shown on the chart. If the answer to all four questions is YES then the game is considered a win, if any one of the questions are answered with a NO the game is recorded as a loss. These wins and losses are based solely on the answers to the game analysis questions and not on the numerical score.

Personal Win-Loss Chart

1. Did I give a 100% effort?
2. Did I concentrate on each point individually?
3. Did I maintain my composure?
4. Did I try something new or different?

WIN: 4 YES ANSWERS
LOSSES: ANY NO ANSWER

Here’s how answering these questions can improve your game:

(1) Did I give a 100 percent effort? Giving your all doesn’t happen automatically. You can train yourself to maintain a high level of effort. The first step is to realize that you’re letting up.

(2) Did I concentrate on each point individually? Point by point concentration is so important, you should get in the habit of treating each rally as a separate “little game.” By doing this you can keep yourself from allowing one error to distract and unnerve you for four or five points. According to the rules the receiver, as well as the server, has 10 seconds with which to get ready. When you fill out your chart, you’ll recall whether or not you used this time to take a couple of deep breaths, to get ready for a new “little game” and to put all past points, good or bad, out of your mind.

(3) Did I maintain my composure? When you lose your self-control and begin to direct your unhappiness at the ref, your opponent or yourself, the natural reaction brings about the improvement that leads to winning.

(4) Did I try something new or different? Though the first three questions apply as long as you play racquetball, this is a question you’ll ask most often as a beginning player. Like the runner who tries for that one extra lap or the weightlifter for that one extra pound, beginning racquetballers should reach into the unknown. Try anything new—a serve, a rally shot, a part of your footwork, a serve return—anything that you have not done while playing before. You might keep a list of what you’ve tried so you’re sure to keep reaching.

The purpose of this system of determining wins and losses is to develop a positive mental attitude toward the game. If you’re heading for your personal win-loss chart, you’ll never walk off the court on the short side of a 21-4 score telling yourself that you can’t improve.
APRO Teaches . . .
Racquetball for Wheelchair Players
by Sam DeCrispino

Sam DeCrispino organized the wheelchair racquetball program in Maryland, has presented racquetball clinics at the International and the Maryland Special Olympics and works with limited-mobility players. He teaches at Towson Court Club in Baltimore, MD.

The nicest thing about being a teaching pro is that it gives you the opportunity to be Jonathan Livingston Seagull—to share your knowledge of racquetball with others, to help them fly a little higher. And one of the special joys and privileges of being an instructor is working with the physically and mentally handicapped racquetball player. Wheelchair racquetball has been mentioned in previous issues of National Racquetball, but this article addresses itself to the organization and instruction of this exciting and rewarding program in your club.

Starting the Program
The key to establishing the program in your club is accessibility. Obtain a wheelchair, get in it on the parking lot and test how much access the club has to wheelchairs from entrance to exit. Go through your entire club in the chair, and test access to courts, bathroom, shower, sauna, pro shop, bar, etc. Accessibility is of prime concern to wheelchair athletes, and, as few clubs have total accessibility, some alterations may be necessary. For example our club's owner, Leroy Merritt, has installed a buzzer on our back door, so wheelchair players can have a desk person open the door (our front entrance is inaccessible), and has put metal plates on the bottom of the court doors to protect them from the chair footrests as the door is pushed open.

Now where do you get players? Contact your local League for the Handicapped, since they are usually involved with wheelchair athletics, especially wheelchair basketball. Most of our players now use wheelchair racquetball as a conditioner for basketball, in addition to the social and physical benefits of racquetball. Other player sources are VA hospitals, rehabilitation centers and word of mouth, once the program commences.

Instruction—Rules and Skills
Learning is a two-way street, and one of the lessons we learned from the men and women in chairs is they want wheelchair racquetball to be as close as possible to "stand up"; or AB (able bodied) racquetball. Therefore we eliminated the previously published rules of a squash-type line across the front wall that the ball must hit above and of alternating serves to different sides of the back court, ala tennis. Reason—they want to hit pinches, low drives, and rollouts and they want to vary serves like an AB. Thus there are only two rule differences: One—you are allowed two bounces instead of one. Two—if the ball, coming off the front wall, strikes the chair anywhere outside the perimeter of wheels, it is a dead ball take over. If it hits inside the wheel, or hits the upper body, it's a loss of serve of point for the opponent. Also a wheelchair player can play a stand up player; each plays by his or her own rules.

Before you even think of instructing wheelchair racquetball, you must play in a chair. Only then will you realize how vital court position and wrist snap skills are to this activity. Obviously the key is getting at the ball, which is not as difficult as it appears, given two bounces. As in "stand up" racquetball emphasize the following sequence: anticipate shot direction, move to the ball, then strike. Center court positioning remains the same. Really stress the wrist snap, to compensate for the loss of leg thrust power. Here is where the "shaking hand" or bicycle handle grip helps nicely to achieve snap power and extension. One exercise to spotlight this wrist action—have your student throw the ball to the front wall, sidearm and overhead, then hit with the racquet.

The first step to setting up a wheelchair program, Sam DeCrispino says, is to get in a chair for a personal test of the club's accessibility. The Towson Club installed a buzzer at the back door as an alternate entrance up the front stairs.
DeCrispino enters the court (note the metal plate across the bottom of the door as protection against the chair footrests) and demonstrates the ball throwing exercise that spotlights wrist action.

double amputee Tony Dean playing racquetball again—he played stand up before his tragic accident in 1979 and some lows (we need publicity so more people in chairs can play, and we need some $800 sports wheelchairs to make the game even more fun). But, of prime importance, we need racquetball teaching pros like you to spread this program around the country.

The American Professional Racquetball Organization, which supplies material for this National Racquetball series of tips for teachers, will be testing and certifying racquetball pros at the following locations in coming months:

- **March 7 and 8**
  - Oregon
  - Court Sports II
  - 4242 Commerce
  - Eugene, OR 97402

What's the Call?
Referee's Technical

by Dan Bertolucci

Next to a match forfeiture the Referee's Technical is the strongest method by which a referee can maintain control of a game or a match. Several questions have arisen as to what evokes a referees technical and just what penalty it carries.

First of all as defined in section 3.5 Referee's 5(f) Referee's Technical. "The referee is empowered to deduct one point from a contestant's or his team's score when in the referee's sole judgement, the contestant during the course of the match is being overtly and deliberately abusive. The actual invoking of this penalty is called a "Referee's Technical". If after the technical is called against the abusing contestant the play is not immediately continued within the allotted time provided for under the existing rules, the referee is empowered to forfeit the match in favor of the abusing contestant's opponent or opponents as the case may be.

(1) Profanity. Profanity is an automatic technical and should be invoked by the referee whenever it occurs
(2) Excessive arguing
(3) Threats of any nature to opponents or referee
(4) Excessive or hard striking of the ball between rallies
(5) Excessive slamming of the racquet against walls or floor, slamming the floor or any action that might cause injury to the court or other players on the court
(6) Excessive delay."

Therefore rule 3.5 (f) (5) and (6) applies to the question raised by Louis H. Meyers of Madison, WI. He asks "What rule applies when an opponent, after missing a shot, pounds his racquet onto the floor or wall; then acting as though the ball was untouchable, and the cause of his miss, proceeds to kick the ball in various directions, instead of returning it directly to the server."

One other question was raised by Jean Scensny of Chicago, after she watched several pro matches using linesmen. "May the referee invoke a technical to an abusing player if the player berates or abuses a linesman whether verbally or by gesture during a game?" The answer is "absolutely."

Maxine D. Michael of Winslow, ME recently played in her first USRA tournament and won her division. She's wondering, as many of you might very well be wondering, if she is now obligated to move up to the next higher division of play. Though this is not specified by the USRA rule book, we encourage our state affiliates to follow this practice. Some states go as far as stating that all finalists are required to move up, i.e.: first and second place finalists, and those who make it to the semis twice in a row must also move up.

The question comes up at an appropriate point in time because soon the USRA, through its 50 state affiliates, will be offering a National Amateur Ranking System based on points, thereby providing perimeters by which tournament players may gauge their talents against other tournament players across the country within their respective divisions of play.

Dan Bertolucci is director of the NRC, governing body for professional racquetball, and is a longtime racquetball referee. Send him your questions about rules c/o National Racquetball, 4101 Dempster, Skokie 60076.
Meet Your State Chairman

Chuck Miner, Mississippi

It was during the Great Easter Flood of 1979 that Chuck Miner learned how devoted Mississippi racquetball players are to their game.

He and his partners had opened the Courthouse Racquetball Club in Jackson just three months before "the rains came and the Pearl River started rising."

For two and a half days the members of the new club—both men and women—joined owners and employees building a levee.

"About half our members volunteered. While we were out there working, the sun was shining—it was 65 or 70 degrees—and the water kept rising. Finally on Easter morning the water broke through and left us with a four foot flood over 12 courts, all our dressing areas, our exercise equipment—everything."

But the members helped with the cleanup, too. Within 30 days the Courthouse was back in business.

Miner, who lived in Elgin, IL until he was 15 and then in Brookhaven, MS, is a chartered life underwriter for Northwestern Mutual Life Insurance Company.

"I went to Chicago in 1965 to work, and I met Dennis Gieritz, who introduced me to Northwestern and to racquetball. At our annual million dollar roundtable meetings the two of us always play racquetball."

Like the Great Easter Flood of 1979 Chicago's Big Snow of the 60's gave Miner a message. Battling the white stuff convinced him to move back to a warmer climate. He picked Jackson after a few years in Memphis because "this area was wide open from an insurance standpoint."

The 38-year-old Miner, an A level player, competes nationally as a Senior. At one time he found himself playing against every racquetball fan coming through Jackson.

"In 1970 there were two courts and only one racquetball player. I was the guy anyone from out of town played."

"Racquetball is still limited in Mississippi," Miner says, though it's grown during the three years he's served as USRA state chairman. "What it will take in this state is a lot of two or three court facilities in small towns. Some are going up now in conjunction with existing health spas or as member-run operations in towns of 25,000 and under populations."

Besides giving racquetball broader exposure geographically Miner hopes to bring the game to younger age groups.

"We haven't touched the 14 and 15-year-olds yet," he says.

Miner's own children—Christopher seven, and Lee Ann, 10—already play. And last spring Lee Ann proved that at least one Mississippi youngster is thriving on the sport. She won the 10 and Under division at the USRA regionals.
The Shootist
by Kathy Baker

(a parody on Kenny Rogers’ “The Gambler”)

On a warm summer’s evenin’, in the finals of a
tourney, I met up with a shootist—just his presence
made me weak.

As we warmed up he took notice of the shots
that I was makin’,
them plies overtaken and he began to speak.

He said, “Son, I’ve made a life out of guessin’
people’s choices,
and knowin’ what their shots would be by the
way they held their eyes.
And if you don’t mind my sayin’, I can see
you’re out of aces,
and because I’m gonna clobber you, I’ll give
you some advice.”

So I stood there with my racquet, and I stared
at him with wonder
as he went through all the motions of
preparing for the fight.
Then the court got deathly quiet and his face
lost all expression;
said, “If you’re gonna play the game, boy, you
gotta learn to play it right.
You’ve gotta know how to kill ‘em, know when
to pinch ‘em,
know when to use the ceiling and know when
to pass.
Never count your point ‘til you see that
Seamco roll out.
Let your opponent run you, you’ll soon run out
of gas.
Every shootist knows that the formula for
winnin’,
is in knowin’ shots to throw away and knowin’
shots to keep,
‘Cause every shot’s a winner and every shot’s a
loser,
and when you’re as good as I am you can
kill ‘em in your sleep.
And when he finished speakin’, he set his
mind to playin’.
He crushed all my defenses as he practiced
and because I’m gonna clobber you, I’ll give
you some advice.”

And somewhere in that hour, the shootist won
the tourney
as he ran my body ragged with shots I couldn’t
reach.

But though I lost the final, I walked away a
winner.
I didn’t have the laurels but a new philosophy.
The shootist fanned my passion; he fueled my
one desire.
I’d meet him in a future match. The outcome?
Wait and see!
You’ve gotta know how to call ‘em, know when to
question,
keep a good humor, have patience and grin.
You’ll never have a good time if you’re always
throwin’ tantrums.
There’s more pleasure in the playin’ if you
don’t always have to win.
United States Racquetball Association
1981 Regional Championships
Co-sponsored by Leach/Seamco

ENTRY DEADLINE: All entry blanks and corresponding entry fees must be in the possession of tournament director by Friday, March 20, 1981.
ENTRY FEE: $20 for one event, $27 per Doubles Team, $12 for second Singles event. Limit two events per player.
OFFICIAL BALL: Seamco 600 (blue) in all events.

RULES OF SANCTION PLAY: All current USRA rules will govern play. No player having accepted $1000 or more in prize money on NRC Pro/Am Tour within last 12 months may enter amateur events.

ELIGIBILITY: All participants must be current USRA members. New membership applications and renewals will be available at host facility for an additional $3 for 6 months and $8 for 1 year.
AWARDS: Trophies to first 4 places in all events. 1st place consolation. $300.00 per diem travel allowance for the winners of the men’s and women’s open divisions to the 1981 USRA National Championships June 6-13, 1981. Allowances will only be awarded to those winners who play in the same event in the Nationals as they won in the regionals. Players crossing Regional boundaries forfeit the trip per diem allowance award should they win men’s or women’s open division. In event of such occurrence the runner up will receive award.

MAKE CHECKS PAYABLE AND MAIL ENTRIES TO: See reverse side of this form. Starting times may be obtained by contacting host facility. See regional tournament information page.

NOTE: All entrants must play in the region in which they reside as depicted by the boundaries set forth on the accompanying map.

Players wishing to cross regional boundaries must obtain approval in writing from USAA headquarters.

Region 2 - Northeast: Pennsylvania, Ontario, New Jersey, Delaware, Maryland, Northern Virginia, New York City
Region 3 - Atlantic Coast: North Carolina, South Carolina, Southern Virginia, West Virginia
Region 4 - Southeast: Georgia, Alabama, Florida
Region 5 - Ohio Valley: Ohio, Indiana, Kentucky, Tennessee
Region 6 - Central: Illinois, Wisconsin, Michigan
Region 7 - Southern: Arkansas, Louisiana, Mississippi
Region 8 - Northern: Minnesota, North & South Dakota
Region 9 - Midwest: Nebraska, Kansas, Iowa, Missouri
Region 10 - South Central: Texas, Oklahoma
Region 12 - Rocky Mountain: Utah, Colorado, Wyoming
Region 13 - Southwest: Arizona, New Mexico
Region 14 - Western: California, Nevada, Hawaii

Tournament Results

South Carolina
The Greenville Racquet Club hosted the First citizens Invitational Dec. 5-7.

Results

Men's Open
Semis: Thomas d. Tillery 21-11, 21-13; Gammons d. Chandler 21-12, 21-16
Finals: Thomas d. White, forfeit

Men's B
Semis: Stocks d. Salvatore 21-3, 21-9; Stewart d. Sutton 21-8, 21-18
Finals: Stocks d. Stewart 21-10, 21-11

Men's C
Semis: Hansbrough d. Salvatore 21-17, 21-10; Couture d. Babb 21-12, 21-11
Finals: Hansbrough d. Couture 21-10, 13-21, 11-6

Men's Novice
Semis: Wood d. Lyles 21-4, 21-4; Mangi d. Culbertson 21-7, 21-7
Finals: Mangi d. Wood 12-21, 21-16, 11-5

Men's 30 plus
Semis: White d. Dlaz 21-14, 21-1; Thompson d. Hamilton 21-11, 21-6
Finals: Thomas d. White, forfeit

Men's 40 plus
Semis: Simon d. Maney 21-12, 21-19; Jones d. Webster 18-21, 21-13, 11-5
Finals: Simon d. Jones 21-7, 21-8

Men's Doubles
Semis: Chandler/Gammens d. Thompson/Watson 21-11, 21-9; Sexton/Anderson d. Thomas/Sarnette 21-18, 9-21, 11-2
Finals: Chandler/Gammens d. Anderson/Sexton 19-21, 12-5, 11-9

Women's Open
Semis: Taylor d. Mahoney 17-21, 21-20, 11-9; Cameron d. Clausen 21-12, 21-20
Finals: Taylor d. Cameron 21-2, 21-11

Women's B
Semis: Taylor d. Head 21-19, 21-16; Norwood d. McClure 21-12, 21-12
Finals: Taylor d. Norwood 21-12, 21-12

Women's C
Finals: Thornton d. McClure 21-18, 21-14

Women's Novice
Semis: Barnes d. Smock 21-14, 21-4; Hammond d. Roland 21-14, 21-20
Finals: Barnes d. Hammond 21-4, 21-2

Michigan
The Parkwood YMCA in East Lansing hosted its annual statewide racquetball tournament Dec. 5-7.

Results

Men's A
Semis: Glosser d. Pfeffer 21-14, 21-11; Lockett d. Schwartz 21-13, 21-1
Finals: Glosser d. Lockett 21-10, 21-13

Men's B
Quarters: Stevenson d. Harris 21-16, 21-11; King d. Soave 21-19, 10-21, 11-10; Garrison d. Hays 17-21, 21-6, 11-1; Tranberg d. Archer 15-21, 21-2, 11-10
Semis: Stevenson d. King 21-12, 21-8; Garrison d. Tranberg 21-14, 21-11
Finals: Stevenson d. Garrison 14-21, 21-17, 11-9

Men's C
Quarters: Matties d. Rosenber 21-15, 16-21, 11-10; Johnson d. Kelsey 21-4, 21-17, Sharp d. Gresow 21-9, 21-7; Weeks d. Murphy 21-18, 21-17
Semis: Johnson d. Matties 21-14, 21-12, Sharp d. Weeks 21-8, Forfeit (Injury)
Finals: Sharp d. Johnson 21-12, 17-21, 11-5

Men's D
Semis: Hasting d. Hynes 21-5, 21-12; Jackson d. Olsen 21-19, 11-21, 11-10
Finals: Hasting d. Jackson 21-13, 21-19

Men's Seniors
Quarters: Erickson (bye); Lund d. Scramlin 21-12, 21-9; Choulard d. Marzullo 21-4, 21-18; Byrum d. Cole 21-18, 21-19

THE HOLLMAN COURT SYSTEM
The Most Advanced Engineering Concepts in Panel Technology & Design

designed and engineered by the contractor-player-owner of the Northwest's premier racquetball clubs.
developed because no court system available today included the key features we demanded in our own court system.

We Met Our Own Demands
by perfecting a precision machined, pre-cut panel of rigid, inter-locking design that results in a completely smooth and solid playing surface.
by inventing a simple and efficient installation method complete with the technical supervision which allows you to easily incorporate our system into your club design.

we manufacture our products and provide a skilled staff of company sales engineers who assist you directly (no distributors) from initial contact through on-site installation and future servicing.

For further information on the newest and most advanced court system in the industry, call or write today.

The Racqueton Meter Court

The World's First Coin-Operated, Modular, Money-making Absentee-Ownership, Racquetball Business

Now you can own your own racquetball business and make up to $25,000 a year or more with each Racqueton Meter Court.

The Racqueton Meter Court offers individuals, sporting goods stores, apartment owners, condominium associations and others a complete self-sufficient racquetball business. It comes equipped with a fool-proof meter unit, custom tokens, benches, awning, lockers, viewing glass, security lights and door plus all the "standard" features that have made the Racqueton so special: high density core stock pressure laminated panels, resilient wood flooring and tournament lighting systems. It's virtually maintenance free and is USRA approved.

Call or write today for more information including a proforma, operating procedures and lease financing facts.

Suite 210 Tower Place 3340 Peachtree Road. N.E. Atlanta, Ga 30026

Play it again, Sam
by James King

Jane Goodsill, Hawaii's USRA state chairman, glowed with admiration: "He personifies racquetball in Hawaii. He's absolutely unique. Nobody has done so much for the game, or helped both pros and beginners alike, as Sam."

These superlatives were echoed by several of Hawaii's racquetball players at the January Catalina Classic in Honolulu. They were praising Sam Koanui, 51, known to many as Hawaii's Mr. Racquetball.

Born at Oahu's Sand Island in 1929 he started as a handball player, but in the early 70s his passion became racquetball, fanned by Ralph Yempuru, an older player, then number one in the State. They played at the Nuuanu and Central Y.M.C.A.'s, the only courts around at that time.

"At first I could barely take a point or two from Ralph," Sam muses, "But gradually, with practice and observation, I developed my defensive game, my pinch and side wall shots, to the point where I began to win some games."

By 1972 he had become Hawaii's leading player, and traveling to Oakland, CA to play in a doubles tournament with Norman Lau, he made his first impact on the world of racquetball by pushing the formidable team of Steve Keeley and Charlie Drake to a hard fought tie-breaker.

Koanui—at that time a volleyball player as well—started stacking up a string of racquetball accomplishments, including the 1975 USRA National Masters title.

Ranked third in his division in Detroit's 1978 Nationals Sam reached the semi-finals, and in 1979, ranked first, he lost in the finals to Bob Troyer at Tempe, AZ.

Every day Sam holds open classes for newcomers and advanced players at the Central Y.M.C.A. next to the popular Ala Moana Shopping Center.

All the clubs turn to Sam for his expertise in refereeing and officiating tournaments. His gentle yet firm Aloha brand of diplomacy calms the most aggrieved player, and his smile encourages his pupils to play to their potential.

In Hawaiian Sam Koanui's name comes from "Ko," meaning "soldier," and "nui," meaning "big." All Hawaii agrees—Sam Koanui is a soldier for racquetball with a big heart for the people.

Hawaiian Family Racquetball

When Lt. Col. Peter Britos, Sr. retires from the Air Force next June, he plans to stay in Hawaii to teach racquetball. He knows of at least seven students who will sign up for lessons.

Lani, 21; Peter Jr., 20; Louis, 18; John, 16; Anthony, 14; Christopher, 10, and Karl Ann Britos, seven, all want to improve their games. During the January Catalina Classic in their state Peter Jr. tried to qualify in the pro division, but lost to one of Hawaii's top players in the second round.

Peter Sr. learned to play racquetball on military courts in the Canal Zone, Turkey and Germany. But it wasn't until 1979, when the family moved from Heidelberg to Hawaii, that the three oldest boys had enough access to courts and teachers to take the game seriously.

The only family member who doesn't play is Miriam Britos, mother of the seven and a former Miss Virgin Islands.

Catalina Classic Amateur Winners

Men's Open Catalina Classic Winner Ed Andrews, left, celebrated his third victory in the amateur division of the NRC pro tour this 1980-81 season. He and Gerry Price, who came in second, are wearing the leis that Lisa Barrett presented to them at the Hawaiian tournament.

Lydia Emerick, 23, left, winner of the Women's Open at the January Catalina Classic in Hawaii, started playing at the University of Maine at Orno, but left college to make a career of racquetball. Now on the staff of the Denver Sporting Club Emerick won the Women's Open at the Coors Grand Prix NRC stop in Omaha last October and last year's Rocky Mountain USRA Regional. Second place Lorna Naluai, 18, has a number one racquetball rank in Hawaii, where she's been playing at the Y.M.C.A. for three and a half years.
Feature

Into the Fire
by Kent Patterson

It's a hot, dry afternoon on a heavily wooded mountainside in Central Idaho. At a distance the dark green of the pines, the blue of the sky and the dazzling white of distant snow capped peaks have a picture postcard beauty. Closer, though, the trees are grey and dusty. After weeks without rain their needles are so dry they snap at the touch.

The air is still, no sound but the humming insects. Then a sudden puff of wind stirs through the tree tops. Another, and another. Thunder rumbles in the distance.

In minutes the sky darkens, the wind whips through the trees, crackling the needles like cellophane. Rain splatters down, raising tiny puffs of dust where each drop hits. Lightening flashes. An ear-shattering blast, and a massive pine splits in half, showering limbs and splinters in all directions.

Suddenly as it came, the storm rumbles off. The sky is blue again, except now a thin streak of smoke curls up from the lightning blasted pine.

Two hundred miles away a phone rings. There's little apparent hurry, and less emotion, but in minutes a DC-3 roars down the runway. Inside Michael House sits quietly until the curl of smoke is sighted. Clumsy with two parachutes and a heavy pack, House steps to the open hatch. With its engines throttled back the plane sinks to just 1,200 feet over the forest floor. Looking out the hatch House notes the wind direction, then carefully selects a tiny clearing near the fire. A last second equipment check, then House leaps through the hatch.

During the summer House is a smoke jumper, an airborne fireman. Armed with little more than a parachute, four days' rations, empty burlap bags, and a Pulaski (a cross between a hoe and an ax), House has fought fires in some of the roughest and most inaccessible country on the North American continent.

In the winter House works as an adoption counselor in the Albertina Kerr House, in Portland, OR, and plays racquetball at the Portland Metro YMCA to keep in shape.

A Lazy Hero

A solidly built man House smokes a pipe and wears a reddish beard which circles his face Irish fisherman style. His office is little larger than a closet and almost as bleak—four walls, two chairs, two filing cabinets, one desk. He claims it was laziness rather than heroics which first drew him to smoke jumping.

"I first starting fighting fires for the state of Oregon in 1964," House says. "One fire I was on we hiked in for about five hours! We were just exhausted by the time we even got there, and still we're out fighting the fire. Then some smoke jumpers from Bend flew over and just jumped in. I thought, 'Hey, now, that looks pretty good!'"

Raised in Baker, OR fighting fires comes as naturally to House as ranching would to a Texan. There's little else to do. Squarely in the desert country of Central Oregon Baker is so dry the locals say even Bigfoot has to carry a canteen. House liked the excitement of fire fighting, and the high pay even more. Best of all he could be free to attend college every fall.
House uses a Pulaski, a cross between a hoe and an ax, to battle an Oregon forest fire.

Studying sociology House attended the College of Idaho and went for his master's at the University of Washington. But the long winters of sedentary life tended to get him out of condition. "I started playing racquetball in about 1970," he says. "I had been playing handball for quite a while, but it got too hard on the hands. It just bruised them. Then I discovered racquetball. Let the racquet take the punishment."

Racquetball, House believes, is ideal for keeping fit. "I'd play especially in the spring, to train, and to be ready for my job," he says. "It's one of the better sports for conditioning. You're using so many different muscles. The short stops, the kind of quick spurts, are very good conditioning."

The quick starts learned playing racquetball can help save a smoke jumper's life. "You watch for falling trees," House says. "If a fire's burning inside a tree, or on top, you use a chainsaw. Sometimes when you start sawing, the top of the tree will fall off. That can kill you."

Worse, the smoke jumper must keep alert when planes are about. With engines screaming and wings trembling with the strain, heavily laden aircraft swoop down to drop flame retardant. "They drop a kind of reddish clay liquid which actually smothers the fire," House says. "The planes will do a couple hundred, or maybe one hundred, miles per hour. Then these gates in the belly of the airplane open and drop out maybe a thousand gallons at a time. If you were under that, the sheer force would kill you."

Racquetball Starts

It's like being dive bombed, except the planes are supposed to miss. "As a rule, they're pretty accurate," House says. Then he grins. "Sometimes, though, they're way off." Then it's time for the smoke jumper to make one of these fast starts he learned in the racquetball court. Only faster.

Ironically House's own closest call came during a jump which looked like a cinch. It was a small grass fire in the tundra region near Nome, AK. No problem finding a clear space, with miles of open territory on one side and the Bering Sea on the other.

"We were jumping right on to the beach," House says. "We just didn't realize the wind was so strong. When we hit, it just picked us right up. I had the chute still on. The wind just dragged me across country, right up to the edge of the ocean." House knew a man could survive only a few minutes in the freezing cold of the Bering Sea. Dragged helplessly across the beach, with those frigid waves coming closer each second, he finally managed to get to his emergency lines and cut himself loose.

His jump partner was less lucky. "He was lying pretty badly injured on the beach," House remembers. "We had to call for some paramedics quick."

Knocking his pipe against his shoe House stoutly denies smoke jumping is especially dangerous. Still he questions whether he will try for a smoke jumping job next summer. For one thing he's working full time, and leaves of absence are hard to get. For another he was recently married. "My wife isn't excited about me smoke jumping," he admits. "I may do it again, I may not. It's outstanding money, but it's hard work. Hard! A real fatiguing job."

In any case during the Oregon rain season House is down on the racquetball courts practicing those quick starts and stops. Probably he won't be needing to dodge anything more than ceiling shots, or an occasional misguided racquet.

It's a lot safer than dodging falling trees.

Court Shorts

No word so far of Nancy and Ron on the racquetball courts, but in Illinois Governor Jim Thompson continues to talk up the game. In a recent issue of The Illinois Governor's Council on Health and Fitness Newsletter Thompson urged his staff to make time during the day for physical activity. "whether it's racquetball or a simple walk around the Capitol!"... The former Patricia A. Reid is now wife of Charles A. Drake, Jr., vice president and general manager of Leach Industries... William B. Tanner received the title "Amateur Athlete of the Year" from the Tennessee Sports Hall of Fame in Memphis on Feb. 13... Twelve club owners in southern California have formed the Racquetball Advisory Board to run cooperative promotions and other joint ventures... Steve Grosslight of Reseda's Mid-Valley Racquetball Athletic Club is in charge... AMF Head's Boulder, CO facility has joined AMF Maark at the company's headquarters in Plainsboro, NJ. Robert Carpenter will manage Head's Boulder facility, where the company continues to make composite racquet frames... A nylon mesh racquetball shoe is a new model in Tennis Tog's expanded line... Lynn Adams, number three in the women's pro rankings, has signed a two year contract with Ektelon... David Michaelis is executive director of the Greenway Athletic Club that will open soon in Minneapolis... United Airline's San Francisco racquetball team, the Bay Area Bangers, was victorious in the airlines' first racquetball city Challenge Meet. In its January employee newspaper, Friendly Times, United listed upcoming tournaments in Detroit, Chicago, West Orange, NJ and Dayton... A story on staying young after 40 in the Jan. 16 "Living" section of the Chicago Sun-Times suggested that one route to the Fountain of Youth was to "play racquetball three times a week."
Ektelon...because you know the game.
Ektelon's new BlueLite or the Jennifer Harding
...because you know your game.

Now Ektelon offers two distinctively different racquets for women. They're light in weight for exceptional mobility and a faster swing. Both feature smaller handle sizes, including super small, for a surer grip and better control. And each is designed for a different style of play.

The New BlueLite. This is Ektelon's most flexible woman's racquet. Constructed of fiberglass fibers in a high-impact nylon matrix, the new BlueLite provides more flexibility than either aluminum or graphite. (250 grams, 18¼" long.)

Jennifer Harding Model. Made from aluminum, Ektelon's Jennifer Harding model is designed for the woman who prefers a racquet with a bit more rigidity. The Jennifer Harding is lightweight, and shorter, to swing faster and maneuver more easily. (250 grams, 17¾" long.)

Aluminum or fiberglass... the Jennifer Harding or the more flexible BlueLite. Whichever you choose, you've made the right choice. Because you've chosen Ektelon. Both the Jennifer Harding and BlueLite feature Ektelon's full two-year racquet frame and full ninety-day racquet string warranty.
NOW THE CROWD PLEASER IS A PLAYER PLEASER TOO!

Introducing TWIN-VUE® Glass Walls.

The crowd sees it as clear glass. The players see it as solid wall.

Up to now, attracting the spectators has always meant distracting the players—with backgrounds that intrude on every shot. But not any more. Now, patented TWIN-VUE glass lets the players concentrate totally on their game, as if they had the house to themselves. They see opaque walls on all sides. Yet they’re surrounded by spectators watching the action more clearly than they would through conventional glass.

With TWIN-VUE, switch on the specified lighting system and the surface as seen from the inside appears milk-white, shutting out the outside to the players. While from the fans’ point of view, the action comes through sharper than ever. Even television through TWIN-VUE is far superior.

With TWIN-VUE, YOU PLEASE EVERYBODY. A better window for the crowd. A better wall for the players. Our standard two-way glass wall has always been the finest you could install. But now, by applying the TWIN-VUE process, we’ve made our best even better.

Write or call for further information!

Standard Features For Every ELLIS PEARSON GLASS WALL SYSTEM
All-tempered glass in compliance with Federal safety codes.
6-ft high all glass doors.
Fully installed anywhere
Five year Warranty.

OFFICIAL GLASS WALL OF THE U.S. RACQUETBALL ASSOCIATION AND THE U.S. HANDBALL ASSOCIATION.

GLASS SYSTEMS by

TWIN-VUE® Glass Walls
All the action.
No distraction.

"BLUE 600"

A Smashing New Idea in a Racquetball!

It's Official... It's the Racquetball adopted by the

USRA

This new pressureless ball has the look and performance of a champion. Off the wall, "Blue 600" responds with a consistent bounce, coupled with a lively action—play after play. Whether you play with a power game or a ceiling game you are always in control. Brilliant blue color gives it high indoor visibility, too. Has the unique distinction of bearing the seal of the USRA. And that's official.

Next time, put Seamco "Blue 600" into play and see what it does for your game. It's a blast! It's the ball control players can appreciate!

IF IT BOUNCES SEAMCO MAKES IT...OFFICIAL

Marty Hogan, right, controls the finals against Jerry Hilecher, whose under par performance may have been due to gruelling earlier matches against Steve Strandemo and Larry Myers.

by Thomas J. Morrow

Marty Takes Easy Win over Hilecher after Tough Semis against Dave Peck in Premier Hawaiian NRC Pro Stop
Paradise Island

The aloha spirit was especially sweet to racquetball’s top seed, Marty Hogan, as he took his second tournament victory in as many tries after suffering through the first three NRC tour stops as an also-ran. Hogan handily defeated Jerry Hilecher 21-15, 21-6 in the final round of the $15,000 Catalina Classic in Honolulu (Jan. 14-18) and, as it was in Memphis for the Tanner-Coca Cola Classic a month earlier, the best match of the tournament wasn’t in the final round, rather in the semi-finals between Hogan and fourth seed, Dave Peck of El Paso.

The fifth tournament of the 1980-81 NRC season has to be termed a huge success—most of the top professionals were on hand, the house was sold out daily and the media turned out en masse to chronicle this first professional racquetball tour visit to the islands.

For racquetball pros like Charlie Brumfield, Don Thomas, Gary Berberet and Mark Morrow their grand entrance to paradise was short lived glory, as all were eliminated in the opening round. For promising youngsters like 16-year-old Mike Levine, Beaver Wickham, Dan Factor and Gary Merritt the scent of the orchids soured somewhat as they also fell by the wayside in the round of 32.

But Larry Meyers, of San Marcos, CA, seeded 24th going into Honolulu, found the fragrant air good for his game as he ousted fifth ranked Thomas and second seeded Mike Yellen before being narrowly defeated in the semi-final round by third ranked Jerry Hilecher 21-18, 21-18.

The husky Meyers played almost flawless racquetball throughout the tournament, and it was a persistent Hilecher overcoming 18-15 deficits in both games who outlasted the blond bomb from San Diego’s North County.

The Hawaii tournament proved that low seeds like Meyers can compete with anyone in the league, but it also firmly reestablished what Marty Hogan has been telling reporters all season—“I’m the most dominant and formidable player in the world!”

Before the tournament opened, Hogan told Honolulu Star Bulletin Sportswriter Jack Wyatt that his poor showing earlier in the season could be explained by the growing competition and his lack of concentration.

“My game is better than ever, it’s just that the competition is getting tougher and the players are under more pressure to win and to improve their national standings,” said the three time defending national champ and current top seeded player. “When I go into a match against an opponent that I’ve beaten 30 times before and he has never won against me, it’s often difficult to get up mentally for the game. All it takes to beat me when I’m down is a couple of lucky shots by my opponent, or a mistake or two by me. When you’ve won as many tournaments as I have over the years, sometimes you slack off and coast.”

Hogan’s words were close to being affirmed when he met 18-year-old John Egeman of Boise, ID in the round of 16. Egeman, a rising star on the NRC tour, played the champ right down to the wire to turn in one of the year’s top matches.
Egerman, who is on his second tour, matched Hogan shot for shot, taking the second game 21-15, to force the match into a tie-breaker. When you’re the underdog, the crowd tends to pull for you and Egerman had quite a following on that Thursday night.

Although the lack of support in the audience was noticeable to Hogan, who had his 23rd birthday while in Hawaii, it never seemed to bother him. After Egerman soundly outplayed him in that second game, Hogan said during the break before going into the tie-breaker “That kid’s very smart and is going a long way in this game.” Then the champ smiled coyly, adding “But not tonight!”

The words turned out to be prophetic as Hogan stepped back onto the court to handily defeat the Idaho youth 11-6.

Although he lost the match, Egerman beamed afterward with the satisfaction that he firmly entrenched himself in the pro ranks—he had challenged the best in the world with a highly respectable game and, maybe, just maybe, their next meeting would be the one where the challenge would be successful rather than merely respectable.

The size of the Hawaii draw forced strong contenders like Ben Koltun and Lindsay Myers to face each other in the round of 16. The same situation occurred with Rich Wagner and Davey Bledsoe. Myers and Bledsoe prevailed. In the second round when Dave Fleetwood had to play fourth ranked Dave Peck, the older Peck was successful, but his 17-year-old brother, number 12 ranked Gregg, had to play Hilecher in the round of 16 and soon found himself working on a tan in Waikiki.

Doug Cohen ran into the Larry Meyers’ buzzsaw and got chewed up 21-8, 21-11 in the second stanza and Craig McCoy, who was sure he had remedied his early round loss blues, met with the stoic Steve Strandemo and was thoroughly trounced 21-6, 21-1. McCoy drew the biggest cheer of the tournament when he slammed an ace against Strandemo with the score 20-0, in the closing moments of their last game.

The record for the longest match of the 1980-81 season was broken during the quarter-finals of the Hawaii stop, with the careful foot placement of Strandemo against the floor mopping and stalling tactics of Hilecher.

As they have done when playing each other in the past, Hilecher and Strandemo stretched the patience of the officials, tried the posterior longevity of the audience and worked on the nerves of each other to do battle for three hours in a tie-breaking marathon in which Hilecher emerged the victor 21-13, 19-21, 11-8.

Reporter Ann Miller of the Honolulu Advertiser was not amused or impressed with Hilecher’s style of play when he went on to outlast Larry Meyers the next day in the semi-final round.

“Meyers may be the most patient man in the islands. For over two hours he put up with Hilecher’s complaints, excuses and sit-downs, and all he got for it was a loss,” wrote Miller in her paper’s Sunday edition. But the Honolulu sportswriter admitted Hilecher’s style obviously worked, although he made “a mockery of one of the fastest sports ever played.”

To be sure the Meyers-Hilecher match was long and drawn out, but it had some very exciting moments that pushed both players to the ultimate in their ability. Make no mistake about it—Jerry Hilecher, despite his style, can play racquetball successfully against the best of them.
To get to that semi-final match with Hilecher Meyers had completely caught Mike Yellen off guard. Yellen attempted to control the game and wear Meyers down, but Meyers would have none of it and won the match in two games, 21-9, 21-14, while Yellen was trying to get control. Yellen was still trying to figure out what happened to him in Memphis, the stop which cost him both the semi-final match (to Hilecher) and his short lived top seed honors. Nearly everyone took Meyers' play in Hawaii lightly, including Yellen, who quickly joined the ranks of his victims.

Dave Peck played Davey Bledsoe in the quarters and routinely put the Tennessean away 21-15, 21-2. Reporters were talking about the powerful play that Peck had been turning in—and it was also being keenly observed by the champ.

"Peck and I will have a real semi-finals battle and then I'll go on to win the tournament," Hogan said rather matter-of-factly to KITV Sportscaster Paul Guanzon.

Afterward Hogan quietly admitted that it was Dave Peck he worries about the most on the tour, for it is Peck who has been the most consistent in play against racquetball's most dominant player. Hogan holds the edge two to one in their 1980-81 match-ups against each other.

"I think it will be Dave and I in the Nationals finals this year," said Hogan, after their semi-final battle which he won for the second straight meeting.

But as confident as Hogan is about his play, he and his fans were worried Saturday evening in what turned out to be the most exciting and best played match of the Hawaii tournament.

Hogan had easily beaten Lindsay Myers of Vancouver, BC, the defending Canadian national champion 21-12, 21-15, and that's about as much that can be said for that match. With Peck putting Bledsoe away and Hogan dispensing with Myers, the two men prepared for what everyone knew would be THE match.

Any fan who has watched the style, habits and play of Hogan knows that he is a slow starter and never really dominates early in that first game. Peck took advantage of this and quickly had an 11-4 advantage before Hogan found the scoring mark.

Peck was able only to score once more before Hogan pulled his own side of the scoreboard to an even 12-12. Then it was 13-13, and all of a sudden Hogan led 17-13. With the score 18-14 Peck began to make a concerted effort to regain lost ground. There were many of the long rallies these two players have become noted for when they meet, but it was a rally of more than 12 exchanges late in the first game that had the crowd on its feet, cheering both players warmly for their tremendous efforts.

In the quarters, lower right, Myers repeats the upset of the 1977 USRA Junior Nationals when he beat Mike Yellen, the favorite. Other quarter-finals pitted Steve Strandemo against Winner Hilecher, upper right; Dave Bledsoe against Victorious Dave Peck, lower left, and upper left, Lindsay Myers against Hogan, who later took the tournament title.
With the crowd wildly cheering for the Texan he allowed Hogan to slam a pinch shot on a return for the side out and then the champ proceeded to take the game with a forehand front wall slam that flew past Peck.

In the second game Peck was the one who got off to a slow start. Hogan jumped to a quick 30 lead and held it for a few minutes before Peck began running the score. It was 4-3 in no time, then the score began seesawing between these two great players. It was 4-4, then Hogan jumped to 5-4 advantage, only to have Peck come right back 6-5. Hogan led 8-6, then Peck was out in front 10-6. Then another tie at 10-10.

Hogan must have left the game mentally, because Peck seemed to have the court to himself as he ran seven straight points on a series of kills shots with a pass and a pinch thrown in for good measure.

At 18-11 Hogan began to come back to life, but only momentarily. He scored three more points to make it 18-14; then Peck made his move, causing Hogan to lapse back into a fog which resulted in three straight skips, giving Peck the game 21-14.

The audience loved every minute of this outstanding play. And despite an obvious majority favoring Peck, both he and Hogan had the admiration of those Honolulu racquetball lovers.

For the first half of the tie-breaker both players continued to play evenly—3-3, then Peck leading 4-3, another tie at 4-4, then—5-4, with Hogan making one of the greatest leaping dive efforts in the match, only to skip another point to his opponent to tie it up again at 5-5.

Hogan regained the offensive and scored with a lightning fast pass and a backhand left corner pinch. It was the turning point in the game and match as Peck visibly appeared to just give up. Peck would make no more serious threats to stand in the way of Hogan and his destiny to be the tournament champion and keep alive his self proclaimed declaration of being the world’s most dominant racquetball player.

It’s no empty bragging when you can back it up with deeds and prize money. Hogan ran four more points to make sure that he would have a clear shot at the $4,500 first place prize money.

As nearly everyone expected the final round match Sunday between Hilecher and Hogan was anti climatic after the Peck-Hogan war on Saturday evening.

Compared to his previous play in the tournament Hilecher seemed slower and less consistent, but he kept fairly close to the champ in the first game. In the second game Hilecher apparently went to the beach, because Hogan clobbered the 26-year-old former fellow St. Louis resident 21-15, 21-6.

Hilecher may have beensmarting from the critique handed in by the Advertiser’s Miller on that semi-final match with Meyers, and he was no doubt thinking about Hogan’s boast that he would retire if he didn’t beat his long time rival, Hilecher. In any event Hilecher seemed unusually subdued, not playing his usual strong game.

“Against Jerry, I’m always very confident,” explained Hogan to reporters after winning the tournament. “My particular style contrasts his totally. I gave him a lot of trouble. At the end he was desperate, trying to do anything because he knew I was playing well.”

About his match with Peck the evening before, Hogan said, “Dave tries to play me slow. I wanted to keep him moving. He’s 200 pounds and every time he fails, it saps his energy. I know, because I know what it does to me.”

Peck said of Hogan “He is a true champ. I love to play Marty. It’s always fun and never an easy match. He executed a little better than I did . . . I had scoring opportunities, but let them get away. I got a little conservative and when you have an opponent like Marty Hogan, you don’t get another chance.”

**Psyched by the Pros**

Tim Geary, Hawaiian teaching professional, says that “watching the pros adds five points to my game. I just get it all back again. I get so psyched up. Hogan—he’s awesome. I went to Strandemo’s clinic for teaching professionals, and it’s fabulous to see him practicing his theories so effectively.

**$15,000 Catalina Classic**

Honolulu, Hawaii... Jan. 14-18

**Round of 32**

Marty Hogan d. Mark Morrow 21-8, 21-5; John Eperman d. Beaver Wickham 21-1, 21-13; Ben Koltun d. Mike Levine 21-20, 17-21, 11-4; Lindsay Myers d. Gary Merritt 21-10, 4-21, 11-8; Rich Wagner d. Gerry Price 21-6, 21-9; Davey Bledsoe d. Gary Berberet 21-13, 21-13; Dave Fleetwood d. Scott Hawkins 21-14, 17-21, 11-3; Dave Peck d. Ken Kahlil 21-6, 21-13; Jerry Hilecher d. Steve Serot (F); Gregg Peck d. Bret Hamlett 21-16, 21-6; Craig McCoy d. Dan Factor 14-21, 21-17, 11-4; Steve Strandemo d. Dennis McDowell 21-12, 21-8; Larry Meyers d. Don Thomas 4-21, 21-17, 11-5; Doug Cohen d. Mike Romo 21-11, 21-8; Keith Dunlap d. Charlie Brumfield 20-21, 21-18, 11-8; Mike Yellen d. Ross Harvey 21-10, 21-8

**Round of 16**

Hogan d. Eperman 21-8, 21-5; Myers d. Koltun 21-17, 21-11; Bledsoe d. Wagner 21-14, 21-16; Peck d. Fleetwood 21-17, 21-7; Hilecher d. G. Peck 21-14, 21-20; Strandemo d. McCoy 21-6, 21-1; Meyers d. Cohen 21-8, 21-11; Yellen d. Dunlap 21-9, 21-14

**Quartetres**

**Semi-Finals**

**Finals**

Hogan d. Hilecher 21-15, 21-6
For the last few years it's been the dream of the NRC, Leach and Seamco to put a pro stop in an exotic place like Hawaii. Catalina made that dream come true. The result was beyond all expectations, as the aloha spirit prevailed. Between matches pros and amateurs enjoyed the island beauty and sunny 80 degree weather. Don Thomas and Larry Myers went snorkeling in Hanuuma Bay; other pros took in sights including Waimea Bay, the Bonsai Pipeline, Pearl Harbor, the Dole pineapple fields, the Pali Lookout and the Waikiki Beach bikinis . . . USRA Hawaii State Chairperson Jane Goodsill discussed her state's racquetball picture with the NRC director over lunch at the Outrigger Canoe Club . . . Catalina representatives at the tournament included Connie Hereford, sales rep; Publicity Director June Wykle, Vice President and National Sales Manager Carlo Blansdenbergo and Ed Murphy, president, men's sportswear division . . . Among celebrities watching the matches were Jim Nabors, who appears nightly at the Hawaiian Village Hilton and Danny Kaleikini, the night club entertainer who extended invitations to his show at the Kahala Hilton to Pro Steve Strandemo and his wife, Terry; NRC Director Dan Bertolucci; California USRA State Chairman Scotty Deeds and USRA Staff Assistants Dave Negrete and Dennis McDowell from Illinois . . . Besides crossing an ocean to play in the pro division Negrete and McDowell served as linesmen and refs . . . Other referees were California's Gary Berberet and Gary Merritt and Arizona's Larry Lee and Paul Darnell, along with Islanders Peter Britos, Jr., Woody Cox, Norman Akau, Sam Koaui, Manny Rezentes, Randy Lau, Charlie Williams and Lloyd Waialae. Eric Schmidt, of California, was a linesman . . . Outstanding hospitality included a buffet of prime ribs and turkey available to players and spectators each day of the tournament. Responsible for the Royal Hawaiian welcome were Honolulu Club . . .

Catalina’s Quick Picks

When a pro prepares for a match, he wants to think about his game—not his clothes. So Catalina, co-sponsor of the Honolulu tournament, has assembled color coordinated shirts, shorts and warmups that make a player look good even if he’s dressing on the run. Catalina’s racquetball apparel comes in blue, gray, black, green and burgundy accented with gray and white.

Shown in the clothes they wore on the Hawaiian courts are, left to right: Don Thomas in a terry shirt, Marty Hogan and Ben Koltun in hooded zip-front jackets, Craig McCoy in a terry shirt and athletic sweat pants and Gregg Peck in a crew neck jersey shirt. The shorts are reversible from heather gray to a contrasting color.

Under his jacket Hogan wears one of Catalina’s best sellers—an open collar shirt with a contrasting raglan sleeve and double stripes across the shoulder. That’s the shirt you see on Marty—and no other pro—on the NRC tour.

PRESENTING THE ONLY RACQUET THAT CAN GIVE MARTY HOGAN 100%.
Leave it to Leach to deliver 100%. And more.

Back in the fall of 1978, we gave Marty Hogan something he couldn’t get from anyone else in the industry.

A Leach Graphite 100. The world’s first 100% graphite racquetball racquet.

Since then, Marty and his Graphite 100 have teamed up to turn the pro tour upside down. With wins in every major tournament—including the 1978 Pro Championship.

And with back-to-back wins to kick off this year’s tour.

**Why Marty won’t go to court without graphite.**

Graphite is probably the perfect racquet frame material. Ounce for ounce, it’s several times lighter than aluminum. Yet, even stronger and stiffer.

And that translates into extra power and speed for any player’s game.

Including Marty Hogan’s.

What’s more, no one’s been able to copy Leach’s innovative technology. So the Leach Graphite 100 is still the world’s first and only 100% graphite racquet.

**There’s more than one way to win with graphite.**

Obviously, not everyone needs the awesome power of 100% graphite. So Leach created three other racquets that harness graphite’s winning ways.

Like the Leach Graphite Competitor. An ingenious combination of maple, ash, bamboo and graphite laminates make it Leach’s lightest racquet. Strong and stiff, it’s a hybrid that packs tremendous power.

**A brand-new breed of Bandido.**

Then there’s the new Leach Graphite Bandido. We took one of the winningest designs and—without altering its shape a single millimeter—beefed up its glass-filled frame with graphite.

The result is, quite possibly, our most dangerous glass-filled design.

**The Performer still is.**

The Leach Graphite Performer was one of the sport’s first composites to successfully marry the awesome power of graphite and the flex of glass. Dark and deadly, it features a modified head, narrow throat and one of the biggest sweet spots in the sport.

There’s not a single imitator that’s its equal anywhere.

**Number One by process of elimination.**

Collectively, our Leach racquets are the winningest graphites on the pro tour. Bar none. With the largest selection of graphite racquets available from any single source.

But then, when it comes to graphite, only Leach can give you 100%. And more.

Because only Leach can give you a choice.

Gives You The Professional Feel

It's the official glove of the National Racquetball Club.
Yes, the Champion Model 610 was selected by the NRC
because of its unique features and design. The popular
wrap-around Velcro strap; soft, thin deerskin palm; foam-backed
terry cloth; comfortable Helenca stretch design... all combine to
make the Model 610 preferred by many professionals and amateurs.
Available in men's and ladies' sizes. At your YMCA, Racquetball
Cub, or Sporting Goods Dealer.

Champion
2200 E. 6th St. DES MOINES, IOWA 50313
Associate Member of National Court Clubs Association
Introducing the Lady AC-250. Light, lovely and patently offensive. Leach believes a woman takes her racquetball every bit as seriously as a man.

A smaller grip for extra comfort and a better feel.

Balance point remains constant.

Playing characteristics remain constant.

Hence, Patent Number 4066260, the Lady AC-250. With a design as unique as its patent reflects.

It begins with a solid core of shock-absorbing ABS plastic, wrapped with a special thin-wall aluminum extrusion. Plastic for control, aluminum for power.

It continues with a modified Special ABS plastic throat and core reinforces the Lady AC-250's unique elongated head for one of the biggest sweet spots in the game.

And it finishes with a radically tapered handle and striking leather grip, for extra comfort and a better feel for smaller hands.

All in all, a slender little package weighing in at a tidy 250 grams.

And re-introducing the Lady Swinger. A perennial favorite. Looking for a little something in glass, ladies? Look no further. The Lady Swinger offers a modified teardrop head for one big sweet spot.

A powerfully sleek throat configuration that minimizes torquing on occasional miss-hits around the edge. A scaled-down handle that fits a lady's hand cleanly, comfortably.

And a genuine leather grip with raised blue beading that breathes easier and grips longer.

Our Lady Swinger took last year's Women's National Championship.

Unusually trim, the whole racquet weighs in at under 250 grams.

So there you have it. An old favorite, a new favorite.

Both giving evidence, once again, to the fact that pleasing the ladies really isn't tough at all.

When you're Number One By Design.
