

RACQUETBALL EYEGUARDS [Updated: July 23, 2013]

According to their manufacturer, the following models of protective eyewear meet ASTM impact standards (F803-XX) that were current at the date of manufacture for use in racquetball, as specified in USAR Rule 2.5(a). The ASTM standard addresses the impact resistance of the tested eyeguards **as a complete unit**. This means that **both** the lens and frame **in combination** must meet the cited safety standard. Those who wear corrective lenses must realize that it is **not** acceptable to merely have impact resistant lens material placed in non-approved frames (everyday, fashion frames) or to wear approved eyeguards over non-approved eyeglasses and frames unless they were designed for that specific purpose. Manufacturers whose contact information is highlighted in green have provided positive ASTM testing results to the USAR and it is on-file.

KEYS TO SPECIAL FEATURES:

- (RX) = Accepts prescription or plano lens;
- (A) = May be worn by youngsters through adults;
- (C) = Designed for head size of children;
- (O) = Designed to wear over RX eyewear
